EPHEMERIDES Nostras annorum sex. 1557. 1558.

1559. 1560. 1561. 1562. quas modo præcedentibus adie-

cimus ad Venetiæ vrbis longitudinẽ exactissimo calculo ela-

borauimus. Hæc est enim Venetæ, atq; maritimæ regionis, nec

minimæ partis Galliæ cæsalpinæ, nedum patriæ nostræ domina,

& alumna, vrbium facile princeps, ac totius ferè orbis celebrauissimum empo-

rium. Hæc est (vt dicitur) vrbis illa auri diues, sed diuor famæ. potens opibus,

sed virtute potentior, solidis fundata marmoribus, sed solidiore etiam fundamẽ

to ciuilis concordie stabilita, falsis cinctâ fluctibus, sed falsioribus tuta consilijs.

Hæc vrbis æ patriæ nostræ inclitæ vsq; ad eo clementissimæ moderatur, vt nõ

minori eam dilectionis affectu amplexari videatur, quã olim Romano senatui,

Octauio quoq; ac Galieno Imperatoribus pergrata fuisse tradatur, à quibus

olim Romana colonia (quod vetustum in porta Bursari Veronæ cognominata

epigrâma testatur) non indigne quidẽ effici meruit, varijs qdẽ ac pluribus orna-

mentis, atq; nobilissimorum ædificiorum monumentis exornata. Quibus omis-

sis (quandoquidem innumeras illius, ac patriæ nostræ laudes, atque antiquissima

prædictus, Nicolaus Cusanus, Petrus Cameracensis ambo Romanæ ecclesiæ Car-
dinales, Cāpanus quoq; Augustinus Riſus, Hieronym⁹ Castilionus, ac demū
cōterraneus, & cuius n̄ Fracastorius ille Medicorū, ac Philosophorū, vel et va-
rū p̄clarissimus minime obtruerunt. Sed neq; tm̄ ipsius Stœckerini Ephemerides
in planetarū p̄gressibus, atq; stellarū fixarū motibus ab oī erroris crimine pur-
gantur. q̄ cernentibus sensibilibus innotuit in coniunctione magna Saturni &
Martis anno domini. 1536. Quæ. 25. Mañ in eiusdem diarijs annotatur. Cū tamen
diebus circiter tribus cœlo palam p̄cessisse, ac vulgaribus per dies plures etiā
præuenisse visa sit. Quum hi tamen per visualem lineam ab oculis eorum ad stel-
las ipsas fallerentur, minime percipientes alium esse circuli transitum per po-

los zodiaci, & centrum stellæ, qui stellarum longitudinem metitur, alium autem
 circum, qui per Zenith nostrum, siue horizontis polum, ac stellæ centrum per-
 transit, quæq; altitudinem stellæ, nō longitudinalem distantiam ostendit. Nec me
 fugit aliquos etiam non vulgariter doctos, atque astronomicæ artis non ignaros
 prædictas Alphonsi, atq; aliorum celestium motuum tabulas omnes damnare,
 q̃p̃ scilicet ex aceruatione minorum aliquot in medijs planetarum, ac celestium
 orbium motibus omissionum per multum temporis spatium erroris congeriem
 clanculum adducant, quod iudiciariæ tantum imbutio, ac mathematicæ artis im-
 muni facile credo persuaderi poterit, non tamen arithmeticam vel medicoriter
 etiam calenti. Qui datis etiam octauis triginta motus alicuius in anno prætermis-
 sis, hisq; per. 6000. productis, sexta quinquaginta tantum in annis totidem ex cō-
 gerie ipsa eduxerit. Dicendum est igitur q̃ omnium fere mathematicorum assen-
 su, Alphonsus ipse maximam præ ceteris planetarum motibus veritatem adinuen-
 xerit (sicet ab aliquibus in stellarum fixarum & augium annotatiōe arguatur) &
 iam annis pluribus elapsis eclipses luminarium, & reliquorum planetarum veri
 motus comprehenduntur. Et si quis error aliquando in Saturni, & Martis motu
 (vt prædictum) reperitur, qui vel per suos incognitos orbes, vel per octauæ
 spheræ motum adhuc nobis ignotum, regulari non possit, per quam planetarum
 orbes aequaliter agitari censentur, eadem ratione, qua medicina, & reliquæ ar-
 tes per sensibiles etiam, vel minimos errores nō repelluntur, & eademmet ipsæ
 astrológica tabulæ minime abdicari debent. Et si namq; medicus (vt Abiosus in-
 quit) alterationem complexionis ab vno mense ad alium non cognoscit, ipsam ta-
 men per discrepantiam qualitatum in annis decem vel pluribus comprehendit,
 vt à sanguinea ad cholicam complexionem migrasse Nec minus si planetarum
 motus superiorum ex octauæ orbis motu agitari & cōcitari possunt, & propterea
 tabularis ratio in aliquo deficiat, nouam tamen per obseruationem mediantibus
 geometricis instrumentis corrigi, & emendari possunt. Quod Ptolemæus maxi-
 me in compositione magna Almagesti obseruandum præcepit, ad hoc vt astro-
 logorum error saltem sensibilis minime appareat. Quod quoniam per prædeces-
 sores nostros, & Alphonsi deniq; in sole & luna, ac inferioribus etiam obcre-
 bras ipsorum reuolutiones longe magis obseruatum videmus, ideo nullus in his,
 vel sensibilis saltem error innotuit. Illos ergo maiores, & antiquiores nobis pro-
 fus imitandos duximus, quod Ioānes ille Mōnteregienſis, Paulus episcopus Fo-
 rosempronienſis, Ioannes Stœflerus (exclusa prædictorum minorum temporis
 anticipatione) Ioannes Blanchinus, & plures alij æuo nostro mathematici in-
 signes eque effecere, donec inquam & quousq; iuniorum obseruationes, non se-
 mel, sed pluries, nec in planetarum motibus tantū, atq; annua solis reuersione, q̃
 etiam in octauæ orbis circulatione, per aliquod temporis spatium cōprobentur.
 quum singuli inferiorum orbium motus à superiori etiā aliquatenus eque depen-
 deant propterea non pōt duobus pedibus claudus, si vno tantum sanetur, rectus
 incedere. Quare tritam modo semitam prosequendo, planetarū, ac stellarum lo-
 ca consulto nolui temere immutare (quum non mea sit, qui mathematicorū om-
 nium peripſema, vel minimus equidem mihi videor) nisi quantum per antiqua
 Græcorum, atq; latinorum exēplaria syderum loca aliqua emendauimus, nec mi-
 nus cœlo, æque decurrentia trutinauimus, quæ pluribus in locis scriptorū incuria

longe deprauata reperiuntur. Quemadmodum postremum fusionis stellam Anno domini labente. 1535. die. 22. Iulij cum Ioue vidimus summo coeli cardine collocatam, eodem pariter momento coeli medium pertransire. Quorum modorum stellarum latitudine perspecta, adhibitaq; vtriusq; differentia norma obremotionem a nonagesimo gradu eclypticæ & medijs coeli transitum, easdem cum septima piscium parte minus tertia gradus vnus, vel circiter meridianum circulum proprijs oculis pertransire perspexi. quo cum gradu stella eadem fusionis aquæ coelum ipsum ex tabulis nostris mediare concernitur, vigesimum septimum piscium gradum præfenti tempore decurrens, quum tamen stella ipsa iuxta deprauatam tabularum plurium, atq; etiam Ioannis Monteregeiensis, siue Stœflerini ephemeridium impressionem per septem gradus longe à veritate labetur, vigesimam tantum piscium partem occupans. Prædictam stellæ annotationem ex altitudine ipsius plurius in meridiano constitutæ, maxime anno prædicto exmediatione coeli, & lunæ & stellæ ipsius vltimo Nouëbris die verissimam prorsus agnouimus. Verum his omisissis, atq; alijs, quæ circa planetarum motus, & octauæ coeli orbis dici potuissent, tanq; longiori, ac posteriori, q̃ nostri, atq; astrologorum plurium, nec vrgarium quidem examine indigentibus: quibus impræsentiarum curam hanc merito delegamus. Prætermisissis etiã his quæ super Ephemeridium commentaria adduci poterant, alias per Ioannem Monteregeiensem, ac Stœflerinum luculentissime pertractata, reiectisq; prius quorundam deliriosis erroribus, præmissisq; his, quæ Ilogogicæ doctrinæ omnino necessaria visa fuerint, Ad electionum canonum normam, in primis aphorismos quosdam sapientum summam colligendo, transire visum fuit, atq; aliqua, anteq̃ ad Ephemeridium exhibitionem, ortusq; & occasus syderum perueniamus, non minus astronomiz professoribus vtilia, q̃ scitu iucunda (diuino opitulante numine) in lucem ex ordine expromere statuimus.

¶ Quomodo homini futura prænoscere, atq; vaticinari liceat contra vulgarem quorundam sententiam.

Abiectis execrabilibus artis magicæ vanitatibus, diabolicæ inq̃, non diuinæ, ac naturalis, reiectisq; alijs superstitionibus, atq; illorum dictis, qui ex astris omnia futura necessitate fatali euenire senserunt, quib; terminos astronomicæ potestatis respectu liberi arbitrij superbe exceßerunt, opinioni quoq; eorum retragabimur; qui futura aliqua quauis humana scientia prædici posse abnegantes (vt astronomia, chiromantia, physionomia, & geomantia, quam fors, & casualis figuratio, leuitasq; inanem, & suspectam reddit) dum hoc solummodo diuinæ menti referuatum alitruunt, ipsius bonitati, ac liberalitati derogant. Si namq; Deus in mensa sujsplius munificentia celestibus corporibus, ac elementaribus virtutibus nouas res quotidie, vt mineralia, vegetabilia, nouaq; animalia, & hominem (quum Sol & homo generent hominem) alterum quoq; producere, ac generare concessit, volucres quoq; coeli, & animalia quædam naturali instructu aeris perturbationem, & temperiem, futuramq; cantu serenitatem, vel motu aliquo corporis prænuntiare donauit: Quis illum homini suam ipsius imaginem gerenti, cuiq; diuinum quid afflatu suo inspirauit, & quod maius est, cui hominem alterum à peccatis absolueret, & emundare concessit (quod diuinæ tantum competit potestati) futura modo aliquo prænoscere, magis q̃ volatilia, & quadrupedia, &

altius elargitum fuisse negabit: Præ cæteris ergo Noam, exinde patres alios (si To
sepho, & Berofo Chaldæo credimus) alios non minus diuinis; & celestibus disci-
plinis edoctum Astrologiam cœlitus, (quod facile credi potest) edocuit, qua il-
le Armenios, & Schyrtas parum post vniuersale diducium instruxit, vt quid ab
anni initio; & cardinibus eius per anni reliquum futurum esset decernerent; ob
quam rem illum diuinæ mentis participem esse dixerunt. Sic pater ille multarum
gentium Chaldæos, & Aegyptios æquedoctos fecit. Nec minus & nos, per
hanc (quam theologiam naturalem Petrus Cardinalis Cameracensis in libro Cō-
cordantiæ Astrologiæ cum Theologia, merito nuncupauit) dum syderum cura
sus emensi, atque edocti fuerimus, agnito cœli situ, ac stellarum dispositione per
interrogationis ascendens, siue per horam exitus infantis ex vtero materno,
perq; coniunctiones, & aspectus planetarum, atque eclipses luminarium futura
contingentia in hoc seculo, non tamen necessitate absoluta, sed conditionata præ-
uidere poterimus. Est namq; cœlum (quod Theologi quoq; non inficiantur, vt
Thomas de Vio Caietanus super psalmo. 104.) vehiculum diuinæ virtutis, quo
mediante motu, & lumine densitatum, ac stellarum ipsius, tanq; secundis causis,
Deus cuncta hæc inferiora, & elementaria corpora ordinat, atque disponit. Ex
quo vultus huius sæculi subiecti sunt lationibus superioribus, vt omnis huiusce
mundi virtus inde gubernetur, vt Philosophus, & Astrologus æque attestan-
tur. Vnde agnita cœli dispositione, futura mundi contingentia facile admodum
erit præcognoscere. Cum namq; Deus cœlum sicut pellem extenderet, for-
mans vniuersitatis librum, Futura quoque accidentia, quæ vim naturæ mini-
me excedant, in eodem mirifice descripsit; Vnde cœli enarrant gloriam Dei,
& opera manuum eius annuntiat firmamentum. Et Deus fecit luminaria ma-
gna, vt ultra temporum diuisionem, essent nobis in signa videlicet futuræ pesti-
lentiæ, belli, penuriæ, pacis, & abundantię, ac cæterorum naturalium euentuum,
nec eis causalitatem attribuit Mōses legislator, ne Iudæi simplices à veri Dei cul-
tu deuiarent, quod expositorum aliqui minime tacuerunt, vt Alphonfus Episco-
pus Abulensis (neq; enim hoc de signis celestibus intelligi potuit, quum non lu-
minaria, sed stellæ cœlo affixæ signa eiusdem efficiant.) Noluit quoq; & filius Dei
vniigenitus tanq; verus homo libri æternitatis eiusdem literis deesse, vt ea, quæ ho-
minis sunt, velut natiuitas, mortis aculeus, & alia plurima per figuram cœli signi-
ficarentur, quæ tamen vim humanæ naturæ minime excedunt non ea quæ solt po-
testati diuinæ mere, ac libere subsunt. Non quod figura cœli causa esset quod
Christus nasceretur, sicuti neque oracula prophetarum causa fuere, quod Ie-
sus pateretur, Sed potius (vt inquit Albertus in speculo) significatio fuerat, Im-
mo & vero verius ipse erat causa quare modus admiranda suæ natiuitatis per
cœlum significaretur. Verum nos ne contra catholicorum dicta, ac diuinam le-
gem, contraq; veram ac naturalem Astronomiam in pronosticandis futuris in
hoc seculo contingat sæpius aberrare, tria nosce oportet futurorum euentuum
genera, Quorum aliqua sunt primùm, quæ habent causam determinatam, &
infalibilem, vt motus cœli, ortus, & occasus signorum, coniunctiones plane-
tarum, & luminarium, eclipses, & similia, in quibus est determinatio, & infal-
libilitas experite motoris, ac etiam omnis impedimenti remotio ex parte qua
libet, nisi inquantū subiacent diuinæ voluntati, quæ tamen semper ordinate agit,

PROOEMIUM

Et de his vera, ac certa est astrologica scientia, atq; ipsorum experta præcognitio. Quibus præcognitis, & eorum effectus facile innotescunt, ut sunt generalia mundi huiusce accidentia, bella, fames, pestilentia, pax, abundantia, regnorum sectarumq; mutationes, grandines, aerisq; maximæ perturbationes, elementorum commotiones, terræmotus, & similia, quæ ex coelesti influxu, atq; elementorum commotione, quæ vi syderum aguntur, quotidie, vel de æuo in æuum euenire conuenimus. Quæ quoniam ab vniuersali cœli motu inuariabiliter æque dependent, nisi secus à prima causa secundæ miraculosæ impediuntur (ut prædicimus) peritissimus in his astronomus non longe à veritate aberrabit. Verum quæ potest Deus potestate absoluta, nunq; vel raro sient, quia sequeretur, qd Deus faciat aliquid, & minus ordinate agat. Quum tamen omnia quæ sunt à Deo, ordinata sint, secundum apostolum. Neq; in his ponendum est miraculum absq; necessitate, vel nisi in re magna, ut in morte Christi solaris defectio, & Iosue necessitatis tempore Solis non naturalis retrogradatio. Secundo aliqua sunt futura contingentia, quæ causam habent indeterminatam, & fallibilem, sicut sunt operationes hominum pure, mere, & simpliciter voluntariæ, atq; ideo non habent determinatam veritatem, neq; determinatam falsitatem, ut philosophus inquit. Nam voluntas hominis indeterminata est, & ad vtrumq; vertibilis, videlicet ad opposita, atq; ideo fallibilis, quia etiam volenti aliquid perficere, multa occurrere possunt impedimenta. Et propterea quum sit anima ipsa hominis nobilior cœlo, nec possit illud, quod corporale est, in animam agere, quæ spiritalis est. Ideo non potest cœlum voluntatem humanam immutare, neq; in eam, nisi in directe inclinando agere. Et ideo talia non possunt astronomica, vel quacumq; alia humana scientia, sed quodammodo exili coniectura præsciri. Tertio aliqua sunt, quæ habent causam determinatam, sed aliquantulum fallibilem, ut ea quæ partim a voluntate hominis, partim a cœli influxu dependent. Et hoc quia cum homo naturam habeat bipartitā, vnam scilicet, cœlestem, & ætheream, videlicet animā intellectualem, alteram vero ex elementorum compagine propagatam, quod est corpus caducum, & mortale, ea propter eandem oportuit duobus agi principijs, cœli, scilicet influxu, & voluntate, & sic effectus, & operationes eiusdem variz, & mixtæ inueniuntur. De his igitur cum magis eadem corpori, qm animæ appropriantur, minusq; voluntati sub sunt hominis, ut bona fortunæ, corporis, & animæ habitudo, ac veluti sensus, & intellectus, sanitas, vel infirmitas, longus vel brevis vitæ terminus, & ut plurimum biathanata mors, quæ vix humana voluntate, & sapientiā regi, vel moderari possunt. De his dico astronomus verum, ac rectum proferi iudicium, non tamen ut de prioribus ita penitus infallibile, verum tamen sufficienti, ac probabili coniectura fundatum. Cum enim cœlum ad hoc, vel ad illud humanū corpus aleret, atq; disponat, bonum vel fortunā, vel malam homini inspiret: non poterit propria voluntate corpus propriū de infano sanum facere (de his loquor, quæ a natura sunt) nec poterit similiter bonam sibi fortunam in negocijs humanis, ac dignitatibus, & honoribus appropriare, & si e de memoria, intellectu, longa ipsius vita, & de cæteris. Nec inficior tamen hominem penitus humana sapientiā, ac providentiā posse stellarum opus adiuuare, vel incuria, et malo regimine abbreviare. Sed hoc raro & per accidens euenit. Quæ vero humanæ voluntati subijci, & ab eadē moderari vel corrigi possunt, licet sint corpori a cœli influxu naturaliter insitæ, &

propagate, vt concupiscentia, & irascibilis, ex quo aliqui ad desideria voluptatū, aliqui ad iram, & vindictam, aliqui ad bonos mores, philosophiam, virtutes, & temperantiam, ad fraudes aliqui, bella, & rapinas magis proni existunt. De his potest naturale iudicium proferri, ad quod cœlum naturaliter inclinât, atq; disponit, & sic naturali, atq; humana coniectura fundatum. Quum autem homo sit animal politicum, ipsumq; Deus intellectuali spiritu insigniuerit, atq; eundem cœlesti radio vultus sui, & rationis lumine illustrauerit, animamq; eidem liberam, ac voluntatem cum potestate arbitrii sui super humanas affectiones, ac syderum inclinationem donauerit, his mediantibus (præueniente diuino lumine) humani corporis affectiones, & passionēs in diuinam, ac supernaturalem alteram naturā transferre, & cōmutare poterit. Vnde in his astronomorum, ac ceterarum humanarum sciētiarum iudicium fallax, & inane. Quod de brutalibus hominibus, qui non ductu rationis, quin voluptatis affectu humanam naturam in irrationalem commutant, vt plurimum verax fiet. Quicquid igitur in libro hoc, vel quorumcūq; astrologorum iudiciorum dictis circa futura contingentia dictum, vel scriptum inueneris, non aliter, q̃ hic modo prædiximus, dictum puta. Quontam nostra hæc est sententia elementaria corpora quæq; siue ex eisdem compacta a superioribus gubernari: cuncta tamen diuinæ potestati, atq; hominum actus, qui ab hac moderari possunt, humanæ subijci voluntati.

ISAGOGICA SIVE INTRODVCTO

ria in cœlestem astrologicam disciplinam, & primo de signis circuli duodecim obliqui.

Zodiacus, siue obliquus circulus in partes duodecim æque diuisus, signa totidem in longitudine, gradus vero duodecim in latitudine cōtinet, ab egyptica medium possidente (quam Sol inuariabiliter calcât) senos vtrinq; impartiens, per quos a Solari itinere planetæ reliqui, plus modo, vel minus, aut nihîl quandoq; diuertuntur. Ex quo ab egyptica septentrionem versus deuagantes, boreales, siue septentrionales; meridiem autem versus meridionales, siue australes per literas S. vel. M. in ephemericum gradibus, & minutis inferius sub planetarum motibus designantur. Pars autem quælibet sena circuli ipsius (vt prædiximus) in latitudine ab egyptica, siue in longitudine a signo quouis in portiones triginta diuiso, gradus æquales dicuntur, quorum pars quælibet minuta sexaginta comprehendit. Sicq; minutum vnum secunda non minus sexaginta complectitur. Ex quo per eundem sexagenarium numerum ad tertia, quarta, quinta, sexta, septima, & vltra (si liber) deuenies. Signa vero duodecim (habito respectu ad imagines cœli, quæ secundo mobili figurantur, siue ad stellas octauæ quoq; orbis) his nominibus, & characteribus, nec ob id temere tamen designantur, sed propriam quodlibet ipsorū significationis, ac figurationis causam retinet, quod veluti etiam planeta quilibet ex septem inferius describendis dominium vnumquodq; proprium per membra hominis virtualiter (vt infra) obtinere decernitur.

V Aries igitur, cuiusmodi formam (vt prædiximus) octauo orbi stellæ affixæ efficiunt, quiq; proprijs eiusdem characteribus vel figuris nono cœlo designatur, hic vt (videtur) cornibus in capite erectis exemplariter figuratur. Ex membris humanis caput, & faciem hominis præseruans,

♄ Taurus itidem per cornua he disposita figuratur, ex membris, collum, & gutturis nodum habens.

♊ Gemini vero per duos tractus coniunctos, qui amplexum Castoris, & Pollucis designant, humeros, brachia, & manus tuentur.

♋ Cancer per oculos oppositos, quos à facie, & tergo habere videtur, figuratiter insinuatur, pectus, stomachum, costas, splenem, & pulmonem possidet.

♌ Leo per caudam ipsius protractam taliter figuratur, dorsum, cor, latus, & scapulas disponens.

♍ Virgo per simbram pallij virginalis significatur, ventrem, viscera, atq; intestina dirigit.

♎ Libra per figuram instrumenti ipsius sic characterizatur, lumbos, inferiora ventris, pectinem, & umbilicum tenet.

♏ Scorpio per aculeum post duos tractus emissum fingitur, inguina, vesicam, & anum regit.

♐ Sagittarius per sagittam demonstratur, femora, & coxas habens.

♑ Capricornus per formam pedis chorda alligati designatur, genua, & popliteum custodiens.

♒ Aquarius per aquam guttatim defluentem demonstratur cruribus, & tibijs eque predominant.

Figurationes, ac significationes, & affectus planetarum.

♄ Saturnus sic in similitudinem figuratur, hominis senis incuruati, & saltē habentis, & est humane naturæ inimicus, vitam destruens, masculinus, malevolus, infortuna maior, frigidus, & siccus. Ex membris humanis dextram aurē, splenē, vesicā, ex humoribus melancholiam, cum phlegmatis cōmissione, ex coloribus nigredinē habet. Magnitudo corporis eius est. 91. vicibus tñ quātū terræ. Quantitas vero orbis & radiorū ipsius ante, & retro accipiēdo, est graduū nouē. Totū zodiacū circuit in annis. 30. fere. Anni maximi eiusdem sunt. 465. maiores. 57. medij. 43. cum dimidio. minores autem. 30.

♃ Iupiter ad denotandum triplex eiusdem fulmen, ira triplici tractatu figuratur. Et est fortuna maior masculinus, diurnus, calidus, & humidus, sanguineus, hepatis, pulmonis, costis, cartilagini, sanguini, & spermati pect. Colorē citrinū seu glaucū, & viridē habet. Magnitudo corporis eius est. 95. quātū terræ. Quāritas orbis eius, graduū nouem. Cōplet cursū suū in annis. 12. fere. Anni Iouis maximi sunt. 428. maiores. 79. medij. 45. cū dimidio. minores vero. 18.

♂ Mars belli dominus telo bellico signatur. planeta masculinus, nocturnus, immoderate calidus & siccus, cholericus, infortuna minor. Auri sinistræ, venis, testiculis prædominans. Cholera ex humoribus, & rubeū ex coloribus tenet. Magnitudo corporis eius quātū terræ semel cū dimidia & octaua parte tenet. Radij eius gradus octo. Circulationē perficit in annis duobus fere. Martis anni maximi sunt. 264. maiores. 66. medij. 40. & dimidium. minores. 15.

☉ Sol quā Apollinis imago pomū aureū manu tenet, eiusdē similitudine, ac circuli rotunditate caracterizatur. Est etiam lumen & cādela cœli, vitam cūctis naturaliter infundēs. Et est planeta diurnus, masculinus, moderate calidus & siccus. fortuna per aspectū, infortuna per cōiunctionē corporalem. Cerebrū humanū, medullarū, neruos, oculū dextrum viri, ac sinistrum mulieris tuetur. Croceum rubeo nistum colorem tenens. Corpus solare terram centies sexagesies, & plus parum cōtinet. Radij eius gradus quindecim, zodiacū lustrat dierum spatio. 365. & horarū fere sex. Solis anni maximi sunt. 1460. maiores. 120. medij. 69. cum dimidio. minores autem. 19.

♀ Venus duplicia tela gestans aurea. s. & plumbea, ideo duplici tractatu recto figuratur. Et est foemina, nocturna, frigida, & humida temperate, phlegmatica. fortuna minor. Lumbos, renēs, nates, ventrem, pectinem, & matricem, atque ex coloribus album declinantem ad viridē tenet. Quāritas eius est pars vna de. 37. terræ, totus orbis eius gradus septem. Cursū suū perficit eiusdē curriēti spatio, quo sol ipse signa duodecim peragrat. Anni Veneris maximi sunt. 151. maiores. 82. medij. 45. minores. 8.

☿ Mercurius galero caput opertum, atque alas pedibus gestans haud dissimili characteris figura designatur. Planeta commixtus, masculus cum masculis: foemineus cum foemininis, cum calidis calidus, cum humidis humidus, fortuna cum fortunis, maxime laudabili aspectu coniunctus, infortuna cum infortunis, præsertim eisdem aspectu malo vel corpore applicans. Secundum aliquos femora, vmbilicum, pectē, crura, neruos, & venas regit, iuxta alios (& melius) os, linguam, cogitativam, ac memoratiuā, manus quoque, & crura possidet. Ex coloribus

autē oē cōmīstū, & variū. Magnitudo eius pars vna est de. 32. millibus p̄tib⁹ terrę. Radij autē ipsius gradus sepiē. Cursus vero suū cum Sole, ac Venere cōficit. Anni Mercurij maximi sunt. 460. maiores. 76. medij. 48. minores. 20.

☾ Luna (quæ vť plurimum cornicularis cernitur) parī, ac semicirculari forma si gnatur. Fœminina est, nocturna, naturaliter frigida, & humida. parum tamen calefacit, magis humectat. p̄ quartas suas qualitātē, vť Sol in quartis, & anni rē poribus quatuor cōmutat. Et est delatrix virtutū, & impressiōnū omniū alio rum planetarū, nā oēs influentiæ per orbē ipsius ad nos vltimo descēdunt. Ex coloribus croceum habet. In homine cerebrū, & in mare sinistrum oculum, in fœmina dextrum, ac vuluam. In vtroq; stomachum, ventrē, atq; in omnibus sinistrę partis portionē eligit. Magnitudo lunaris globi est vna pars de. 39. par tibus terrę. Radij vero ipsius graduū duodecim sunt. Annus autem siue men sis Lunę peragratōrius ab vno ad eundē zodiaci punctum, iuxta eiusdem me dium, & equalem motū dierum est. 27. horis. 8. fere. Alias lunaris siue consecu torius mensis dierum. 29. cū dimidio, omīssis minutis, de quibus infra. Anni Lunę maximi sunt. 320. maiores. 108. medij. 66. & dimidiū. minores vero. 25.

☉ Caput draconis veluti capiti caudam conuertens designatur (quorum vter que ex interfectione linearum duarum Solis, fac Lunę orbium in cœlo descri bitur) cū bonis bonū est, cū malis malū. In coniunctione namq; bonorum boni tatē ipsorum adauget, sicuti in malorū coitu malitiam mali exaggerat.

☿ Cauda vero ipsius verso modo signata bonitatem boni, & malitiam mali di minuit. Et ideo bona cum malis, mala autem cum bonis decernitur.

Aliæ etiam sunt species inimicitie ratione oppositionis domorum, & exaltationum. Fortior autem planetarum amicitia est quando planetæ concordant in natura, qualitate, substantia, & potestate. Quando autem amicus amico associatur augmentatur eorum bonitas, e contra in malis fit. Bonus vero in coniunctione mali malitiam ipsius, non tamen absque boni detrimento mitigat.

¶ De coitu & aspectibus, seu radiationibus planetarum.

♂ Coniunctio siue congressus luminarium (quæ circulari figura nodo aliquantulum conexa figuratur) perfecta, seu partilis exhibetur, cum planeta aliquis in eodem gradu alteri planetæ, vel Soli per minuta. 10. ante, aut retro. tã per longitudinẽ, quã per latitudinẽ copulatur, & tunc dicitur esse in corde solis, vel eidem unitus, ab inde vero citra videlicet à gradu vno, ante vel post placita fertur coniunctio, dum. si iuxta medietatem orbium, siue radiorum amborum coeuntium, vel minus, vnus alteri adheret. Ex quo proprie Solẽ communiter per gradus. 12. combusti à lumine Solis, & per gradus. 15. sub radijs esse dicuntur: & tunc raro vel minime cœlo apparet, ni modo stella aliqua ex fixis fuerit, quæ per gradus totidem in latitudine ab eodem solari corpore elongetur, nam tunc matutina vel vespertina, etiã Soli longitudinaliter unita apparere poterit, quod in minori etiam latitudine in Luna & Venere nonnunquam fieri inferius demonstrabimus.

* Sextilis, siue hexagona radiatio pari radiorum numero designata, est quum planetæ inter se distant per sextam zodiaci partem, videlicet per gradus. 60. qui est aspectus mediocris dilectionis, et amoris, atque ideo mediocriter bonus,

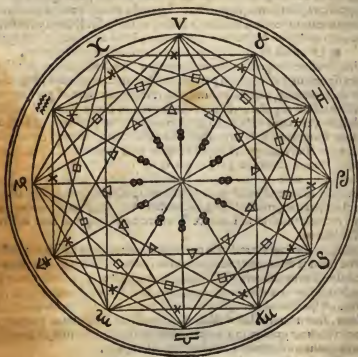

□ Quadratus siue tetragonus simili geometrica figura demonstratur. gradus tenet. 90. Aspectus odij, imperfectæ tamen inimiciæ, idcirco mediocriter malus

Δ Trinus, siue trigonus haud dissimili caractere designatus tertiam circuli partem: videlicet gradus. 120. amplectitur, perfectæ amicitie, & amoris, nusquam in qualitate signorum ab inuicem discrepans.

♂ Oppositio, seu diametralis irradiatio, quæ per circulos parvos inuicem oppositos figuratur, est quum planetæ mutuo sese diametraliter opponunt, per mediam. scilicet circuli partem, qui sunt gradus. 180. propterea aspectus odij atque aperta dissensionis, ac perfectæ inimiciæ.

• Applicatio autem dicitur quum per gradus sex iuxta aliquorum sententiam, seu per medietatem radiorum vtriusque aspicientis, vel corpore coeuntis alteri adherent. Separatio autem quum corpore, vel aspectu ab vno quoque prædictorum loco à gradu vno vsque ad graduum numerum præmissorum distinguntur. Haly tamen voluit quod aspectus non sit plus quam de tribus gradibus ante. Separationem autem ab vno gradu & ab inde infra, nec minus applicationem iuxta quantitatem orbium planetarum accepit. Tu autem quãto propinquior fuerit corpore, vel aspectu applicatio, minusque longe separatio, tanto aspectum fortiolem diiudica,

Figura radiationum omnium in Zodiaco.

Schema hoc omne continet radiationis exemplum à quouis Zodiaci signo perceptum. Sic nāque planeta in Ariete Geminos sextili, Cancrum quarto, Leonem trino, ac Libram diametrali aspectu à dextris aspicit. Similiter à sinistris, hoc est contra successione signorum ♊ & ♋ & ♌ eisdem aspectibus retrospicit. Quod non minus de reliquis coeli signis singulariter, atq; exemplariter descriptum apparet. Signum signo, & gradum gradui referendo. Et si nāque Stella quæ libet radium suum tam luminis, q̃ virtutis occultæ infinite, atq; orbiculariter vbiq; diffundit, efficaciora tamen deprehensa sunt loca hæc quatuor, videlicet latus sexanguli, quadrati, trianguli, atque oppositi stellæ situs eidem. Quia autem planeta essentialiter in fortuna per aspectum, vel aliter per accidens sæpius fortuna fit, & e converso. Ideo accidentia eadem breviter inferius colliguntur,

De esse circuli accidentali, ac domibus cœli duodecim.

Totum hoc nostrum supernum, atq; inferius positum hemisphæriū in partes duodecim (licet diuersimode) æquales tamen secundum quid diuidi decernitur, quas domos, ædes, ac domicilia appellant. Cōmunior tamē, & rationabilior assertio quatuor cœli quartas horizonte, ac meridiano intercephas in partes ternas iuxta quatuor alios circulos per puncta sectionum amborū predictorū circulorum ductos, & sic cœlum totum in duodecim partes æquales in æquatore fecat, inæqualia zodiaci interstitia iuxta positionem circulorū sex distinguentium (coassumptis horizonte, ac meridiano) efficiens. Initium vero diuisionis istius in oriente ab horizonte inferius statuunt, quem horoscopum, vel ascendens vocant eo quod de inferiori ad superius hemisphærium sese tollit. Hunc etiam cuspidem, cardinem, aut angulum orientis communiter appellant, cui secunda succedit, de hinc tertia domus subsequitur. Sicq; post angulum quemlibet quartę domus, scēptimę, ac medię cœli cuspidem, singula succedens, ac reliquę quatuor cadētes domus succedentes ipsas, subsequuntur, q̄ duodecim in totū numeratim efficiunt.

Quarta igitur pars, quę est ab ascendente gradu supius, videlicet, 12, 11, ac, 10, domus orientalis dicitur, masculina, puerilis, vernalis quoq; & sanguinea.

Quarta vero quę est ā gradu decimę vsq; ad gradum occidentis, videlicet nona, octaua, & septima, meridiana, fœminina, æstiuā, iuuenilis, & cholericā.

Quarta alia quę est ab occidente vsq; ad gradum quartę domus, videlicet, sexta, quinta, & quarta, occidentalis habetur masculina, autumnalis, melancholica, & senilis.

Quarta deniq; quę est ā quarta domo ad ascendens: videlicet tertia, secunda & prima septentrionalis, fœmina, hyemalis, phlegmatica & decrepita.

Ascendens medietas eadem est, q̄ ā gradu decimę vsq; ad iunum terrę continet. Descendens, quę ā gradu ipso medię cœli per septimam vsq; ad gradum prædictum medię noctis habetur.

Dextera cœli vocatur, quę est supra terram, videlicet, 12, 11, 10, 9, 8, & 7, domus.

Sinistra cœli quę est sub terra, videlicet prima, 2, 3, 4, 5, & 6, domus.

Dextera ascendens: est pars cœli, quę est ab ascendente ad septimā sub terra.

Sinistra ascendens, quę est ab ascendente ad septimam supra terram.

Dextera orientis est pars medię hemisphærii ab oriente ad occasum per septentrionem.

Sinistra orientis pars est altera itidem supra terram per meridiem ab ascendente vsq; ad angulum occidentis.

De accidentibus planetarum, tum inter se, tum in semetipsis.

Prohibitio in primis est, quae aspectus prohibet planetarum, & coniunctiones, vel radios ipsorum impedit. Et hoc dupliciter corpore, scilicet vel aspectu. Corpus enim planetarum aspectum alterius impedit, dum propius planetarum, quam ille qui aspectus fuerit, vel etiam dum pares aequae fuerint gradus tam planetarum aspectus terit, quam corpore applicantis. Aliter planetarum radii, dum propius tertio fuerint tam corporalem coniunctionem, quam aspectum longinquioris impedit.

Receptio planetarū est, qñ planeta iūgit domino domus, in qua est, vel exaltatio nis, aut aliarū minorū dignitatum essentialium. Et ipse similiter dñium aliqd habeat in p̄dicto loco in quo est. Verū qñ vnus est in dignitatibus alterius, & econuerso, melior est & p̄fectior receptio, q̄p̄ eē possit, maxie ex trino, & sextili.

Redditus virtutis dicitur, quando planeta ex domo propria, vel dignitate alia alteri iungitur planetæ cōbusto, aut sub radijs Solis, vel retrogrado existēti. Hic namq̄ pp debilitatem suā alteri respicient virtutem reddit dño ipsius, quā reti nere nō potuit. Et si ambo fuerint in angulis, vel succedētibz, redditus iste p̄ficuus erit. Similiter etiam si planeta alteri applicās in angulo fuerit, vtilis erit, licet alter in cadenti sit, dum tamen alterum recipiat. Item dum ille qui reddit virtutem alteri in angulo fuerit, alter vero non, cum proficuo erit illi, non tamen econuerso, nisi cum receptione (vt prā diximus) fiat. Verum si ambo cadentes fuerint, cum detrimento redditus erit.

Translatio luminis, vel naturæ primo fit, quando separatur planeta leuis cursu à ponderoso, dehinc alteri iungatur, tunc primus transferr naturam secundi ad tertium. Item si leuis ponderosiori se, iungatur, & hic aliq̄ adhuc ponderosiori se, tunc medius hoc modo naturam primi ad tertium transfert.

Redditus luminis, si quando planetæ duo inter se distantes tertio alicui ambo iū gantur: tunc tertius iste amborum lumē colligit & projicit ad eodē, vel etiā ad loca quælibet signorum zodiaci sextilis. s. trini vel quadrati, & diametralis radiationis, quibus in locis planeta alius existens duorum prādictorum lumē recipit, & tunc idem fere est quod translatio.

Pulsatio est, quando aliquis planeta per aspectum iungatur domino signi, exalta tionis, triplicitatis, termini, vel faciei signi illius in quo fuerit. Vel si leuis econ uerso in aliqua dictarum dignitatum suarum fuerit, & planetam aspiciat nullā habentem dignitatem in loco in quo est. Tunc ille primo naturam mittit ad dom̄num suū ipsius signi. Hic secundo modo propriam leuis naturam ponde rosiori, & peregrino mittit.

Refrenatio est quando planeta alteri applicans corpore, vel aspectu, antequam eidem coniungatur, sit retrogradus. In tali casu refrenatur, ne talis coniunctio, vel aspectus compleatur.

Contrarietas fit quando planetæ ponderosus in medio est duorum leuiū. Et quā do prior deberet ipsi medio coniungi, cui applicat, econuerso tertius leuis, qui ab eodem elongabatur, per retrogradationem medio copulatur, & transiens illū, alteri etiam priori coniungitur. Et sic dupliciter prioris cōiunctio cum me dio non tantum impeditur, sed etiam cum huic secundo congrredi debuerit, ter tio contrario modo compulatur.

Abseisio luminis eodem fere modo interuenit, quum tertius. s. priorem, & secundum per gradus aliquot in aliud signum transiens per retrogradationem medio huic, nō priori tamen coniungitur. Alio modo etiam si fuerit planeta leuis perens coniunctionē ponderosi. Et hic ponderosioris aspectum, vel congressū ineat, antequam. s. prior ipsi coniungatur, tunc tertius lumen prioris à secundo abscindit, cuiusmodi congressum expectabat.

Frustratio itidem fere secundo hoc modo, quo abseisio luminis fit, quum. s. prior à secundi congressu frustratur, dum secundus hic signum in quo fuerat exiens,

& signū aliud iniens, planetæ tertij radijs copulat, prioris cōgressū postergās.

De his quæ accidunt planetis com Sole & Luna,

& primo de combustione.

EX his quæ spectāt planetis quinque erga luminaria prima est cōiunctio, de qua supra. Hinc est cōbustio, cuius quidē terminus in planeta quolibet p semidiā metrū Solis, videlicet gradus septē cū dimidio, & semidiā metrū orbis radiorum planetæ cuiusvis aggregatū accipit, & sic in Luna gradus erunt tredecim cū dimidio. In Venere & Mercurio gradus vndecim. In Marte gradus vndecim cum dimidio. In Ioue, & Saturno gradus duodecim. Sic namque dum Soli appropinquant p gradus totidē ante, vel retro, pprie cōburi dicunt. Alij tñ dātur cōbustionis termini, quibus promissa adimplet planeta quilibet, vel nō in annis maxime vitæ nati, quum fuerit alchocoden. Tres namque superiores dū occidentales fuerint per gradus. 15, a Sole, ac postea dū Sol ab eis elōgatus fuerit p gradus decē cōbusti prorsus, dehinc vsq; ad. 15. sub radijs esse dicuntur. Venus & Mercurius dum Soli p gradus septem appropinquāt, donec per gradus quinque trāseant, cōbusti sunt. infra. 12. sub radijs. Luna per gradus. 12. ante & retro, vel saltem per gradus. 10. postea cōburitur, abinde supra sub radijs solis vsq; ad. 15. permanet. Et hæc cum Venere magis, q̄ planetæ aliij à sole comburitur.

Almugea planetæ est, vt sit occidentalis à sole, & inter eos tot sint signa, quot sunt inter domum Solis, & planetæ ipsius, vel sit occidentalis à Luna, & sint inter eos tot signa, quot supra.

Orientales dextri tres superiores dicuntur quum noctu ante Solē oriuntur, e contra in die occidunt.

Occidentales sinistri conuerſo quum die post Solem oriuntur, noctu occidunt. Et à coniunctione per gradus. 30. vsq; ad. 60. fortificantur in orientalitate sua. Et à retrogradatione per gradus totidem postea occidentales fortes fiunt, postea vtrinque debilitantur.

Inferiores duo qñ separant à Sole p directionē, & vespere post Solē occidunt, & Luna sistit, occidentales dicuntur. Venus & Mercurius retrogradi post cōiunctionē, at Luna post oppositionem cum Sole orientalis dici solet.

De his quæ accidunt in semetipsis est vacuitas cursus, quādo, si separatur ab vno, & nulli iungitur, donec fuerit in illo signo.

Feralis, vel agrestis dicitur qñ planeta nullus signum aspicit, in quo ipse fuerit, Peregrinus vbi nullam habet dignitatem. In suo haym, vt masculinus & diurnus in die supra terram, & in signo & gradu etiam masculino, & e contra.

Ascendens in circulo suæ augis, videlicet i superiori parte, dū p gradus. 90. ipsius augi applicat (quæadmodū in Ephemeris cuiuslibet pprie vniuscuiusq; auges describunt) & ab auge itidē p gradus totidē descēdens, minor q̄ lumine, & magnitudine, & cursu dī. Ab opposito vero augis p gradus totidē dū ascendit, ac descendit, maior erit lumine, & magnitudine. Et qñ mouetur plus medio cursu, vel minus, dicitur auctus, vel diminutus cursu.

Et quando transit nodum intersectionis deferentis cū ecliptica, qui genhazar dicitur, septentrionalis, vel meridionalis ascendens vel descendens sit, quemadmodum in Ephemeris notatur. Quod in Luna per te hoc pacto per propriam tabulā, & canonem agnosces.

Tractatus de Electionibus

Sicuti in magnarum rerum inceptionibus (vt inquit Albertus in speculo) ex electione laudabilis horæ minime libertas arbitrii coercetur, sed potius electione horæ contemnere arbitrii præcipitatio, non libertas existimatur. ita neq; in paruis omnino contemnenda censetur, atq; in his maxime, quæ ex naturali elementorum complexione, ac syderum cursu eueniunt. Vnde medici, qui in ægritudinibus sanandis, ac medicinis dandis, (vt inquit Alexâder de ales. 5. parte summæ quest. 115. ar. vi.) minime considerant motus corporum supercoelestium, aut ipsi nescientes, aut aromatarii, non Medici censendi sunt. Obseruare vero tempus in his quæ mere subsunt libero arbitrio, vel quæ nulla cœli ratione, vel elementarium rerum complexione, aut nulla temporis qualitate dependent, vanum, & superstiosum omnino reputatur, vt ea quæ de bisextili anno, vel calendis mensium, ac feriarum, vel etiâ de dierum Lunæ numero satue prædicantur. Homo namq; duobus regitur principijs (vt idem Albertus in suis mineralibus) natura. s. & voluntate, natura subiecta est syderibus, voluntas autem libera. Propterea (vt prædiximus) aliquæ sunt operationes, vel effectus pure corporales, q̄ syderibus plane obediunt, tanq; secundis causis ad hoc, & ad aliâ a Deo constitutis, vt est sanitas, vel infirmitas, longa, vel breuis hominū vitâ. Aliæ sunt operationes mere, ac pure voluntariæ, quæ terminos astronomicæ potestatis excedunt, vt facere hoc, vel illud bonū, vel malū, vel aliqd ad vtrunq; veribile. Aliæ sunt partim corporales, partim voluntariæ, atq; iō mixtæ. Vt facer iter, qd̄ primū ad voluntatē hoīs p̄tinet, vel nō facere. Quod autē ex eo itinere bonū, vel malū corpori eueniat, vt damnum, lucrum, honorem, vel dignitas, hoc ex cœlorum influū dependet. Item quia si quis regē vel ali quē alium aditurus, lētitia tempus obseruat, vt illum petitioni suæ facillē inueniat. Itaq; constellatio aliquāter disponit, & inclinât humanū volūtātē ad hoc vel ali quid agēdū in hoc quoq; et si libus electio horæ laudabilis (vt plurimū) p̄ualebit.

Radices & fundamenta electionum.

Non eligas primo, nisi natiuitatē, vel reuolutionē, aut interrogationis horā illius noueris, cui electionē facere intendis: quia forte accipies ascendens inimicū, & cōtrariū radici natiuitatis, vel reuolutiōis, ita qd̄ dabis ei p̄ ascendere duodeci

in 7, octauā, vel sextam suæ radici, vel forte mouebis ei dñū vel malū, qđ retraheretur non poterunt fortunæ, quas ei collegisti, quia forsitan illæ fortunæ erūt inimicę, & cōtrariæ suæ radici, siue illa infortuna, qđ debilitasti electione tua forte erit signatrix in radice, te hoc nesciēte. Et sic aliquis incipiet iter die infortunato, & malo, & libere lucrabitur. Et alius quidem nāuim intrabit die electo, bono, & fortunato, & nunquā reuertet ad locū suū, vel aliis impediētur, & rē amittet et alius tñ lucrabitur. Et hoc nō accidit nisi pp discordātiās natiuitatū suarū, nec proficit alteri exitus, quē fecerūt duo vna die, & hōra. Pōt igit qđ se adiuuare de electionibus, qñ bonitas electionis adiuuat significatores radices: qđ si hđē boni, vel mediores fuerint, vel saltē non multū dānati, electio in hoc proficit, & ad bonū trahit. Quod si modo contrarium fuerit, non apparent electionum effectus. Vt si quis etiam pro suscipiēdo filium idoneam ad hoc horam elegerit, & habuerit in natiuitate domum, & significatores filiorum damnatos, priuationem filiorum denotantes, non erit profectus ex hoc in electione laudabilis horæ: quia electio non tantum valet qđ vel retrahere, vel effectum contrarium producere possit illis, quod planeta in radice natiuitatis significauit.

¶ Aphorismi in electionibus operum.

Quādo habueris natiuitatē, vel interrogatiōē, vel etiā anni reuolūtiōē; tñ debes aptare domū, ac significatōrē natiuitatis vel interrogatiōis rei ipsi incipiendæ. Aliter fortunetur domus hora inceptiōis rem ipsam significans, ac dominus eius, & similiter eiusdem rei significator.

¶ Aptetur etiam Ascendens dominus Ascendentis, & dominus domus ipsius. Et sit ascendēs de natura simili & cōueniēti in qualitate & rōne rei incipiendæ, vt signa mobilia pro itinere, terrea: vel fixa pro plantationibus, & seminū iactu, atq; pro litibus, Martis signa, vel pro igne, ignea et cætera. qđ si dominus ascēdētis fuerit infortuna ponas eum aspiciētem: Ascendens de trino vel sextili.

¶ Aptetur Luna primum, quia participatiōē habet in re oī, necnon dñs domus eius. Quæ (vt plurimum) abhorrenda est in ascendente sm Haly.

¶ Aptetur Sol sicut rex, qui (nisi sit in Leone, vel ariete) in ascendente, vel in domo rei malus est.

¶ Item planeta rem naturaliter significans, vt Venus nuptias, Iuppiter substantiam, & similiter de alijs.

¶ Itē locus coniunctiōis, vel præuētiōis præcedētis electiōem, & dñs eius.

¶ Decima domus sūm, necnō dñs eius, & quartæ, qui sinē rei attēdit: dum tñ quartam domū aspiciat: aliter nō significat sinē rei, sed dominus domus Lunæ, si Lunā aspexerit, sin aliter, planeta, cui primum iungitur Luna post hūc dñs domus partis fortunæ, si hāc aspexerit, sin autem remanet significatio Lunæ, & domino domus eius principaliter, vel quarto à Luna signo, vbi tunc fuerit, & secundum aliquos domino quarti signi à loco partis fortunæ.

¶ Et si prædicta oīa adaptare non poteris, quæ potes fortifica, & ad miuus apta si significatōrē rei, Ascendens, ascendētis dñm, & Lnnam. qđ si fuerit infortunata, tac eam cadē ab ascēdēte, & planetā impediētem Lynam pone dñm primæ, quia prima non impedit semetipsam, & sit ipse liber ab infortunis. Et si nō potest poni dominus primæ, ponatur in. 10^a, vel. 11^a, vel. 5^a, qđ si recipiet Lunā, frangeretur tota eiusdē malitia, similiter pone Iouem, aut Venerē in Ascendēte, vel

Cauendum est tamen præcipue ne Luna rumulantia signa decurrat, quæ sunt Aries, Taurus, & Capricornus. nec sit ascendens Leo, ne ue Luna applicet aut per corpus, aut per aspectum planetæ retrogrado, quia infirmus facile medici- nam euomet, aut alias læsiones incurret.

Fuge aspectū Lunæ ad ambo infortunia Saturni maxime, etiā Δ vel * (ni secus natiuitati præfuerint) coniunctionem vero amborū □ vel ♀ penitus abhorrebit. simile planetarum dominium in horis diei (ni radicitus influerent) euitando.

DE ELECTIONIBVS

ter dominus eius videlicet Venus. Sed si curare volueris antiquā ægritudinem, fac q̃ Luna sit in Tauro, vel in eiusdem triplicitate. In recentibus autem morbis eligatur Cancer, Scorpio, & Pisces præsertim. Adhuc omnis ægritudo, quæ fuerit à capite vsq̃ ad pectinem curatur, Luna vertente ab angulo terræ vsq̃ ad medium cœli, sed si fuerit à pectine vsque ad pedes, curam hanc elige Luna existente à medio cœli vsque ad angulum terræ. In omnibus istis sit Luna aucta numero (si fieri potest) iuncta q̃ fortunis. Vel saltem Iouem pone in sexta.

Caendum est in omni cura ne Luna sit in oppositione domini sextæ, vel octauæ, etiam si fuerit fortuna, q̃ si fuerit in eiusdem sextili, vel trino, non vitiat. Similiter octauæ dominus ab angulis penitus, & significatorū aspectibus reijciatur. Caue etiam in omni morbo, ne Luna sit in horoscopo, nec etiam domiciliū quartum, vel octauum possideat.

Item si splen purgare volueris, videas ne Saturnus in cœlo fortis sit, sed purgabis hora Iouis, hunc ipsum fortunando, & fortificādo in hora electionis pponēdę. Similiter Hepar ne purgabis hora Iouis, ipso fortificato in cœlo, sed sub dominio Saturni.

Cor etiam, ne purgabis hora Solis laxatiuo, vel purgatiuo medicamine, dare autem cordialem, vel confortatiuam, bonum est cum Sol fuerit in decima, vel horoscopo, maxime ascendente signo Leonis.

Pulmonem in hora Mercurij, Fel et renes hora Martis, testiculos hora Veneris, demum cerebrū ipsum hora Lunę nequa q̃ purgabis, sed sub dominio cōtrariorum planetarū in qualitatibus euacuabis, ascendente tū signo membro illi sym-bolum, vel virtutem influente, vel Luna fortunata signum ipsum possidente.

Si volueris virtutes reliquas humani corporis (absoluta expulsiua) adiuuat, veluti attractiuam, quę per Solem viget in caliditate, & siccitate, Fiat hoc Luna existente in signo igneo, vt ♀ & ☿ excepto ♄.

Si digestiuam, quam ♄ gubernat, in signis aereis ♀ & ☿ accipiendo, solummodo primam Librę medietatem.

Si retentiua quam ♄ gubernat, Luna sit in ♄ aut ♀.

Quod si Lunam in talibus signis expectare non potes, signum pone in horoscopo ex prædictis, virtuti illi, quam corroborare desideras, opportunum, simile huic quoq̃ planetam ex prædictis in forti cœli loco collocando.

★ In electione itinerum per terram non pertinentium ad bella.

Conuenit vnicuiq̃ homini ne incipiat iter profectuum sibi, nisi secundum natiuitatem, & secundum reuolutionem anni sui, vel secundum ascendens questionis sue, si non habuerit horam natiuitatis sue, licet alias electio bona, & laudabilis non noceat sibi. Et secundum hoc apta Lunam, & ascendens, tertium quoq̃ signum radice illius, & eorum omnium dominos. Et si iter fuerit ad regem, pone decimam natiuitatis ascendens, & si fuerit pro mercantia pone secundam radice ascendens hora exitus sui ad iter faciendum. Et sic de singulis. Aliter si fuerit iter tuum per terram, pone signum terreum mobile vel commune in horoscopo, dum non poteris iter tuum differre, ad minus fortunando Lunam, & dominum horę, & pone eandem in .10. vel .7. Et sit crescens lumine, & numero, & ab infortunis libera aspiciens ascendens, vel dominum eius, Et caue ne sit Luna in domo prima secunda quarta sexta nec in duodecima,

Item Mercurius fit euasus à combustione, & ab infortunis liber maxime in itinibus pro vendendo vel emendo merces.

Item dominus ascendentis non sit cōbustus, nec retrogradus, nec infortunatus, sed in bono figuræ loco. Et sit in ascendente fortuna vel in aliquo angulorum.

Item caue à coniunctione malorum ☐ & ♀ ad Lunam, quia plus eidē nocumen ti afferunt, q̄ si ascendens aspiciant, quia Luna proprie significationem habet super omne rei cuiusq̄ initium, maxime in itineribus.

Nec malum tamen tantum facit Saturnus itinerantibus per terram, q̄ qui per aquam ambulant, nec Mars per aquam quantum per terram. quin Saturnus fortunatus ex laudabili aspectu ad Lunam itinerantibus per terram proficit, sicuti nec Mars per aquam damnificat.

Differendū est iter, quandiu Luna fuerit in vltima, vel etiā in secūda facie Librę. Luna in signo bono, vel mediocri coniuncta Ioui, vel Veneri per corpus vel per ☐ aut * melius est q̄ possit esse.

Aliter fac eam cadere ab ascendente (dum infortunata fuerit) ascendens vero & dominum ipsius, dominum horę, ac planetā significantem rem illam, pro qua vadit viator, præ omnibus fortunandos elige.

Et scias q̄ Ascendens est significator loci, a quo separatur, qui facit iter, & septima est significatrix terrę, ad quam vadit, decima vię, vel itineris. Et quarta significatrix est itineris in reditu ad domum. vnde quis istorum locorum melioratus fuerit, bonitatem significat secundum significationem sui ipsius. Et quis eorum damnatus fuerit, damnum in suo significato indicat.

¶ In itineribus particularibus & primo ad regem.

Si volueris ire ad regem, vel ducem, aut principem, iungatur Luna Soli, vel saltem dñō decimę de trino, vel sextili aspectu, & si fuerit cum receptione, melius erit, sitq̄ Sol in bono loco. s. in primo, vel decimo, vel vndecimo, quod si fuerit cadens, nullum habebis bonum. Et si fuerit in septima vel quinta, vel in quarta, significat modicum boni, vel cum magno, & longo labore.

Caue in hoc ne ponas Lunam in Aquario, vel in signo Piscū. Alias cum rege moraturus, qualescūq̄ cōueniens ascendens elegeris, pone Iouē in eo, & fac eum iungi cum dñō decimę ex trino, vel sextili aspectu, vel etiā ex quarto cum receptione, vel saltē pone Iouē in nona, qui vtrolibet sit saluus, & liber ab infortunis. Et vitabis enim ponere in quarta domo. Et aspiciat ipsum Luna de decimo, si fuerit Iuppiter in primo, vel de septimo, si idē fuerit in nono. nec sint tamē in sexto, vel duodecimo abinuicē signo. Et si nō poteris hoc facere, testificet Venus Ioui de primo, septimo, decimo, vel quarto, cum receptione, vel sine, vel a sexto, vel tertio cum receptione. Caue a ♄ & ♀ ne sint in aliquo angulorū, & ne Luna sit impedita à malis, vel à combustione, vel cum cauda draconis.

Quod si iter fuerit ad Antistites, religiosos, nobiles, iudices, vel legum doctores, pone Lunam iunctam Ioui per corpus, vel per aspectum ☐ vel * vel saltē per ☐ cum receptione ex aliquo angulorum vel alio bono loco ab Ascendente.

Et si volueris ad alias personas iter arripere, pro senibus, ignobilibus, vel austeris hoibus elige Saturnū. pro prepositis armorū Martem, cauendo ab ipsorū coniunctione, vel ☐ aut ♀ ad Lunam. Et sint in succedentibus angulorū liberi ab infortunis, Et planeta cui primū iungit Luna sit saluus ab omni impedimēto,

C ij

quia quando planeta cui applicat Luna, vel qui aspiciat ascendens (maxime si fuerit dominus septimæ) infortunatus, retrogradus, vel tardi motus fuerit, significat duritiā, & poenā ex illo itinere. Pro muliere autē apta Venerem, quæ masculinum signum cum applicatione ipsius ad Lunam possideat, Prædictis quoque modis omnibus pro scriptoribus, & mercatoribus, aut sapientibus viris applices Lunam Mercurio.

* ¶ In itineribus per aquam.

SCito quæ radices itinerum per aquam iuxta Abenragelem sunt quinque, quarum prima est Ascendens, sub quo incepta fuit naus illa. Secunda hora qua emitur naus. Tertia est hora, qua ponitur in aquam, & ista est fortis radix. Quarta hora qua intrat homo nauim. Quinta radix multum fortis est, quando mouetur naus in itinere primum. Et hæc omnes radices obseruandæ sunt. Maxime autem ne moueatur à littore naus illa in hora Saturni: Et ne Luna Scorpij signum decurrat, & præcipue etiam à præmissis Lunæ impedimentis, & alijs de quibus supra præcauendum erit.

¶ Electio in his quæ opere alchimico, vel alias per alembicum, & ignem fiunt.

Aspice in hoc vt sit Luna in signis cōmunitibus, salua ab infortunis, & ascendens similiter sit signū cōmune, & eius dominus liber sit ab omnibus impedimentis. Et apta, & confortata planetam significantē materiam illam, quam operari volueris, sub dominio etiam horæ ipsius, vt Saturnum pro plumbo, & horam Saturni. Solem pro auro, & horam ipsius, Lunam pro argento. & sic de singulis.

¶ Electio in plantandis arboribus.

Plantaturus arbores, vel vineas, elige pro ascendente signa fixa, potissime autem Lunam Taurum cum Venere decurrentem, vel ab eadem aspectu aliquo affectam. Et si non poteris habere Lunam in Tauro, pone eam in Aquario, Et si nō in Aquario, in Leone, dummodo in hoc ab aliquo planeta de signo aquatico ex aspectu aliquo aspiciatur. demum post Leonē in signo Piscium, vel Virginis Lunam ipsam statuas. sed omnibus alijs præferendus est Taurus, postea Aquarius, & sic de reliquis vt supra. Saturni sydus in prima sit directus, vel vndecima, quinta, vel secunda in aliqua dignitatum ipsius. Et si non poteris eum ponere in prima domo, pone tibi Iouem aspicientem Saturnum vel vbicumque fuerit Iuppiter, fac eum aspiciere Saturnum aspectu amicitie, & sit ille in loco, in quo habeat potestatem aliquam. Et si neuter illorum poterit poni in primo, pone ibi Lunam, vel pone eam in decima, vel vndecima, vel saltem in quinta, vel tertia. Et nunquam ponas eam impeditam in plantationibus, vel seminationibus. Et quod modo dictum fuit de signis fixis eum reliquis, id etiam de ascendenti hora plantationis, vel foueæ ipsius excauatione accommodandum curabis. Item dominum domus Lune, partem fortunæ, & domum exaltationis ascendentis signi, magis quam dominum domus, si potes, fortificare non obliuiscaris. Et caue ne des Marti partem aliquam in prædictis, neque in seminum iactu, & hac Lunam cadere ab eodem. Item optimum erit, si dominus domus Lunæ aspiciat eam ex signo aquatico. Et si non fuerit ascendens signum fixum, sint dominus ascendentis, & Luna orientales, & ascendentes ad augem suam, vel saltem alter eorum: quia cito crescet arbor illa. Si vero fuerint ascendentes ad longitudinem longio-

rem, & non fuerint orientales, licet cito crescet, sero tamen fructificabit. Quod si contra planetis eidem acciderit, vtrumlibet scilicet vel alterum eorum, contrario modo eueniet. Et si prædicta singula adaptare non poteris, nec signa fixa significatoribus exhibere, signa communia adhibe, Lunam ad minus in Tauro, vel in vltima parte Sagittarii cum Ioue, præterquam in opposito eiusdem, liberam, & non impeditam in bono, ac forti thematis situ collocabis, quæ nec minus hoc in Ioue, vel etiam parte fortunæ (si potes) obseruari consiluitur.

Horam eligere in seminum iactu, quæ eodem anno, vel sequenti fructificare intendimus.

PRæ omnibus Ascendens sit mobile, vel commune signum ad minus, et dominus ascendentis, & Luna similiter in signo mobili, vel comuni, terreo, vel fixo, quæ si fuerit in Ariete, oportet eandem aspici à planeta Ioue maxime, vel Venere signum aquaticum possidente. Cancer ex prædictis, Capricornus, et Virgo probatur, ac etiam vltima mediæ Sagittarii, et Pisces etiam laudantur. Sit tamen Luna aucta lumine, & numero, quia aliter minuetur illud semen. Et sit libera à malis, & dominus ascendentis similiter, & dominus domus eius. Vltimo si non potes adaptare omnia, pone Lunam in Virgine liberam ab omni impedimento. Et aptasti horam seminandi.

Scias etiam quæ ex signis fixis, Taurus laudatur, sed rarificat semen.

Vnde oportet quod proiciatur plus de semine, quæ confectum sit.

In acquirendo amore, & amicitia.

QValecunq; sit ascendentis signum ex fixis, vel communibus saltem, idipsum fortunabis ex laudabili aspectu domini sui, qui sit receptus à domino vndecimæ, vel ipse ascendentis dominus in vndecima reperiatur, Veneremurque aspiciat, & similiter vndecimæ dominus Veneri iungatur. Pone Lunam mundam, & liberam à malis, & iunctam planetæ significanti personam illam, ut Saturno pro senibus, Ioui pro religiosis, Marti pro militibus, Soli pro regibus, & magnatibus, Veneri pro mulieribus, & Mercurio pro mercatoribus, & scribanis (ut prædiximus in capitulo de itineribus particularibus.) Et ambo similiter sine salui & liberi, & in bono loco constituti. Sitque Luna in vndecima pro amico acquirendo, vel iuncta domino vndecimæ, vel Ioui, aut Veneri cum receptione, vel saltem in domibus, exaltationibus, aut duabus saltem ex minoribus dignitatibus, libera, fortis, & aucta lumine, & numero, aspiciens saltem dominum domus in qua fuerit. Si vero amicitiam petieris, ut in re aliqua lucreris, pone Lunam in domo significante rem illam, ut in octava pro hereditate, in sexta pro animalibus parvis, in duodecima pro maioribus, fortem scilicet, et receptam à domino domus, vel exaltationis signi in quo fuerit, qui non sit diuersus, vel contrarius rei ipsi, quam quæris. Similiter pars fortunæ in ipsamet domo cum Luna reperitur, nec sit Mercurius impeditus, vel malus esse (nisi forte receptus fuerit) nam tunc petitionem cum difficultate tamen & duritia adimplebit.

✱ **CD** Dominum anni secundum Bonatum ex figura introitus Solis in Arietem reperire.

Considera primū quis planetarū sit dñs ascendēis, qui si fuerit tribus gradib⁹ ante lineā anguli ipsius, vel quatuor postea, ipse erit dñs anni, & significator esse vulgi, dñtamen non sit retrogradus, aut cōbustus, qui si sic fuerit, querendus est exaltationis signi eiusdē dominus, qui si ita male dispositus fuerit, vel alibi, q̃ prā diximus, situatus, & sic non poterit esse dñs anni illius, tunc si reuolutio diutina fuerit, querendū est dñiū ā Sole, vel ā Luna, si fuerit in nocte, qm̃ luminare cuius fuerit autoritas, si habuerit aliquā dignitatē in ascendēte, & fuerit in aliquo angulorū, erit dñs anni. Quod si iterū luminare illud non poterit esse dominus anni, quere tunc dominatōrē ā domino termini ascendētis signi, deinde ā dño triplicitatis, demū ā domino saltem faciei. Quod si non poteris habere significatōrē ab ascendente, vel ā luminari t̃pis, tunc secundo quere dñatorem anni ā decima per modū iam dictū. qui si ita (vt prā diximus) dispositus fuerit, vel saltem decima gradū (vt supra) quocūq; aspectu, prēterq; opposito, aspexerit, ipse tam super regē (qui decime dñs fuerit) sup̃ vulgū, ac populū significatōnē habebit. qui si nō potuerit pro significatore haberi, tertio dñiū quere ā domino septime, quarto ā domino quartę domus, quinto ā domino vndecime, sexto ā domino nonę, septimo ā domino quintę, octauo ā domino tertię, incipiendo semp̃ ā domino, domus, deinde ā dño triplicitatis exaltatiōis, postmodū ā luminari cuius fuerit autoritas, deinde ā dño triplicitatis, vel saltem domino faciei. Et si aliquis ex prā dictis planeris aspexerit aliquam ex domibus nominatis, maxime ā trino, vel sextili aspectu duobus gradibus antea, vel tribus postea, dum habuerit ibi aliquam dignitatē, ipse erit dñs anni, postq; per alia prā dicta non inuenierit aliū. Et si fuerit ascēdēs similiter domus, vel exaltatio alicuius luminaris, & ipsum aspexerit ascēdens prā dicto modo, vel saltē fuerit in secundo ab ascendēte, maxime Sol in die, & Luna in nocte, ipse erit dñs anni. Itē aspice dñm ascendētis, aut exaltationis, q̃ si luminare cuius fuerit autoritas, fuerit in domo alterius illorū, & aspexerit eū ā trino, vel sextili, nec fuerit cadens ab ascendēte, sed fuerit in bono ac forti loco, ipse erit dominus anni. Et si nullus planetarum fuerit si dispositus, cōsidera quis eorū fuerit fortior, & maiora testimonia habuerit in figura illa, videlicet in locis prā dictis, & da illi dñiū super alios, faciendo almutē ipsum, ac dñm diet, et hōgin significationibus participes. Et per illos iudica principaliter statū mundi, vel nationis, vel alterius rei, sicut etiā per diuisorem. i. dominum termini, ad quā peruenit diuisio, vel directio, & per dominum similiter radiorum diuisionis participē. i. vel receptorem, ac dominum signi profectionis. Quod si ascendens reuolutio nis anni fuerit signum fixum, pro anno integro sufficit. Si commune, figuram altā dirige, cum Sol libram ingreditur. Sin mobile fuerit, situs cœli variandus erit, dñ Sol signa tropica quolibet inijt.

ope presentis tabulæ adiutus, **quoto** dierum numero in anno præmissum profectio-
tionale signum, & consequenter dominus ipsius principaliter perduret, quoque
annitempore subsequenti signi dominum in collegam suscipiat, per gradus inte-
gros, & minuta (si qua fuerint) ab ipso profectiois gradu ad subsequenti signi ini-
tium addisces, gradus videlicet integros in prima tabulæ linea exquirendo, diem
quoque singulum pro quibuslibet minutis quinque diebus, & horis, e regione gra-
duum perfectorum acceptis iungendo. Amplius si quo dato dierum numero in
anno vel mentium etiam, his omnibus in dies productis, eodem met numero ta-
bulam hanc inieris, si maiorem vel minorem proxime dierum numerum ibidem ex-
quirendo, ipsorum edirecto graduum numerus integrorum offeretur, quos pro-
fectiois gradui addendo, certus profectiois annuæ locus pro tempore dato re-
sultabit, dummodo pro die qualibet in ingressu tabulæ omisso (nisi secus idem die-
rum numerus propositorum tabulæ præcisus offeratur) minuta quinque gradi-
bus præmissis addantur. Quod autem de ascendente gradu profectiois quoque,
& radiorum domino prædiximus, ex quibus status nati, fortuna, & infortunia,
quæ nato accident anno illo ex applicatione ipsorum ad benigniores, vel prauio-
res planetarum radiationes illicet percipiuntur, non minus hoc de gradu decime
pro magisterio nati, de gradu Solis pro dignitate, & honore, necnon de reliquis
hilegiis partibus pro accidentibus alijs æque fieri mandatur.

Nec ignorandum tamen non solum in annuis solaribus reuolutionibus hoc idem
visque quaque, quod dictum fuit, obseruari, verum etiam in mensibus nati reuolu-
tionibus, quas Ptolemæus Astronomorum princeps ad menses lunares addu-
xit, alij vero ad menses solares. 12. referunt, quando scilicet Sol ad subsequenti signi
gradum deuoluitur, quem prius in radice occupat. Ex lunaribus vero reuolu-
tionibus menses Lunæ profectionales scilicet tredecim sunt in anno solari, qua-
rum quilibet dies, 28. horas. 2. mi. 18. fere continet. Et sic mense quolibet signum
vnum ab ascendente radice, & gradu eodem profectionaliter procedit, gradui
cuiuslibet horas. 22. cum dimidia fere proportionaliter partiendo, hoc pacto sem-
per quæ mense primo, & ultimo tertiodecimo scilicet ascendenti signi dominus
dominium sibi propius asciscit, secundo mense subsequenti signi dominium, ac
tertio tertij in dominos æque & collegas partialiter assumit. Et sic de reliquis,
quæ omnia Ioannes Monteregienfis in tabulis luculentissime expressit. Ideo
missa fecimus.

Portio autem horæ inæqualis in die, vel nocte sciatur, dum tabulam hanc infra scriptam cum horis integris ab ortu Solis ad occasum acceptis, accesseris. nam quod in prima vniuscuiusque horæ linea à.7. vsque ad.17. è regione.0. ex horis vel minutis desubter notatum inuentes, cuiuslibet horæ spatium diei ipsius ostendet, si cum arcu diurno tabellam ipsam inuasferis, vel nocturnæ horæ cuiuslibet limitatum tempus aperiet, si cum nocturno tempore tabulæ eiusdem ingressum quaesieris. Quòd si vltra horas perfectas in arcu aliquo diurno, vel nocturno minuta aliqua adhæserint, cum minutis eisdem horarum, vel proxime minoribus sinistrorsum acceptis collateralem lineam descendentem ingredi, atque e directo ipsorum in angulo communi sub horarum integrarum linea tempus ibidem notatum excipies. Verum si vltra minuta eadem, cum quibus tabulam ipsam modo ingressus fueras, aliqua deinceps abundauerint, pro quolibet minuto superextanti secunda, quinque temporis prius exhibito horæ ipsius diurnæ, vel nocturnæ adijcito. Sic namque augment. Habito ergo adæquato temporæ horæ vnius, qualiscumque diurnæ, vel nocturnæ, per multiplicationem ipsius cæterarum terminum facile elicies. Nam si duplum temporis eiusdem ortui, vel occasui Solis addideris, horam secundam perfectam diei, vel noctis habebis. De coniunctionibus magnis planetarum.
In quibus natorum reuolutionibus coniunctiones magnæ etiam considerandæ sunt, quæ homines ad diuersa accidentia, moresq; animi generaliter inelinant. Horū maxima est coniunctio Saturni, et Iouis in principio Arietis, quæ in 960. annis fit. Secūda autem amborum coniunctio est in initio vniuersiūq; triplicitatis in annis videlicet. 240. Tertiū coniunctio est Saturni, & Martis in initio Cæcri, quæ quibuslibet. 30. vel circiter fit. Quarta est coniunctio Iouis, & Saturni in vnoquoq; signo eiusdē triplicitatis. Quinta est introitus Solis in æquinoctij vernalis punctū, videlicet quæ in capite Arietis anno quouis fit. Vñ astrologi anni initium sumunt. Sexta est coniunctio luminarium in mensibus lunaribus cōiunctionibus. Et scias q̄ qñ dicitur ascendens cōiunctionis in reuolutionibus annoꝝ mundi, signum ipsum significatur, quod hora introitus Solis in primū Arietis punctū ascendit. Quorū dñm significata, et apotelesmata in libris iudiciorū exquire.

De inquisiendō Hylech significatore vitæ & Alcocoden annorum domino.

Si paup̄tas fuerit in die, considera primum locum Solis, qui si fuerit in ascendēte, vel per quinque gradus ante, vel in decima, aut in vndecima, & aspexerit ipsum aliquis habens ibi aliquam dignitatem à domino domus ad dominum faciet vltimo, etiam si fuerit signum ipsum femininū. iose erit hylech, vel si modo fuerit in septima, octaua, vel nona prædictis modis, in signo tamen masculino. Aliiter Sole hylech non sic extante cum conditionibus ipsis, Lunam secundo confide

rabis quæ si fuerit in angulo vel succedenti, vel in tertia etiã, & in signo, & quarta sceminis, vel saltem in signo eiusdem sexus, cum aspectu semper, vt prædiximus, ipsa erit hylech. Quæ si non fuerit, & natiuitas fuerit coniunctionalis, tunc tercio quæras hylech ab ascendente, quarto à parte fortunæ, vltimo à loco coniunctionis. Sed si natiuitas fuerit præuentionalis, & luminaria non fuerint apta hylech, tunc à parte fortunæ ad ascendens, vltimo ad gradum præuentionis singulatim procede, in his tribus de sexu non curando, sed tantummodo q̃ in angulo, vel succedenti cum aspectu (vt prædiximus) reperiuntur. Alchabitarius tamen post loca luminarium vtrolibet à gradu coniunctionis, aut præuentionis primum, deinde ad partem fortunæ vltimo ad ascendentis gradum processit. In nocturna generitura, Luna, primo inchoandum exabit, secundo à Sole, dehinc successiue secundum prædictum modum. Aspectus ab eodem gradu vsque ad medium orbis acceptatur, qui in parte fortunæ nisi tantum à domino domus, vel exaltationis consideratur secundum Haly, in alijs generaliter vt supra. Absque aspectu non potest esse hylech, nec alcocoden, nisi cum luminaria in prædictis locis fuerint apta hylech in domibus, vel exaltationibus suis, nam hoc modo cum fuerit hylech, vel alter eorum, erit etiã alcocoden absque alio aspectu. Item in alio casu, quem ponit Haly, videlicet cum dominus loci luminaris temporis in gradu fuerit, qui diem æqualem, vel pares habeat ascensiones cum loco ipso luminaris. Verum tamen planeta combustus infra terminos, quos præmisimus, non potest esse hylech, neque alcocoden, qui est dator annorum nati, quicq̃ plures habet dignitates in loco hylech, ipsumq̃ e meliori loco cœli, vel esse ad Solem aspiciat, tum plures vel pares cum alio fortitudines habuerit. Et interpretatur vir, & hylech vxor. Datus nato Alcocoden annos suos maiores vel minores & medios, iuxta situm, fortitudinem, & dispoñem ipsius. Qua de re plures astronomorum sententias rimare, Solutionem autem penes Antonium de Montulmo, & Io. Monteregium.

Inter ceteras Astronomiæ partes, quæ in pronosticandis futuris versatur, difficiliss, ac difficillima, pene habetur certa futuræ aeræ qualitatis præcognitio, cū non ab vno tantum dependeat principio, quemadmodum natiuitatis, reuolutionis, aut interrogationis iudicium, verum à pluribus, vt ab ascendente coniunctionis, vel præuentionis in reuolutionibus annorum, quartarum anni, congressuum luminarium, tetragonum, atque oppositionum, & ingressuum signorum, & propterea varios, atque diuersos sortiatur, effectus, quos etiam ab ortu, & occasu stellarum, nec minus, quam ex prædictis studiosa nouit antiquitas. Adde q̃ caloris nimia, frigorisue accessio aut nubes prohibet, aut diuidit, aut cito dissoluit. Ex quo in eadem regione æstate hic pluit, illic serenitas. Atque frigidissimis temporibus, vt calidissimis etiam, parum, vel raro pluit. Ad quod etiam accedit varia regionum dispositio, ac situs, vt septentrionalis, meridiana, conuallis, campestris, ac montuosa. Vnde calidissimis, ac frigidissimis, siccis, vel humidis ventorum afflatus, hic niues, & glacies, illic æstus intenses sub eodem hemisphærio, nec diuerso fere tempore, vel loci interstitio adesse concernimus. Cum igitur prædictorum effectuum bipartitæ, vel etiam tripartitæ sint causæ, quas nouit vniuersorum philosophantium schola, in his oportet iudicium proferenti multas adhibere considerationes.

Non enim constellatio eadem, sub qua plures nati sunt, omnes reges facit, vel

omnes albos, cum alicubi, ut in Aethiopia, omnes nigri sint, quæ omnia non tantum secundum virtutem, & qualitatem agentis, sed etiam secundum dispositionem suppositi intelligenda sunt. Sic erunt igitur & Astrologorum dicta, & colorum apotelesmata in elementaris corporis dispositione ponderanda. Quæ quoniam aeris dispositio ex vi cœli ac syderum influxu primo, ac principaliter consistit, ac reliquæ prædictorum accidentium causæ tanquam secundariæ supponuntur. Hæc propterea ex multorum Astrologorum dictis breuiter exponetur, quoru, nec præmissoru minus qualitate inspecta, non longe multu à veritate abeundo,

¶ Quæ ex Haly dictis, Omar, & Albumasaris

sententia colliguntur.

★ **A**ccidentia & qualitates aeris in anno dignoscuntur ab ascendente coniunctio Anis, vel præuentionis Solis, & Lunæ, quæ fuerit ante introitu Solis in Arietem, & à loco luminarium, in figura, & à locis similiter planetarum. Vnde si Saturnum inueneris in aliquo angulorum ab ascendente, vel etiam à domino ipsius firmum in eodem loco, ac fortem, maxime in medio cœli, & aliqua dignitatum suarum, in tempore caloris, minuit calorem, & in tempore frigoris facit magnu frigus. Et si remotus fuerit ab angulis, non multum diuersificabit annum in qualitate sua, nisi forte dum venerit ad angulos ascendentes. Et quando in anni initio fuerit in angulo à domino ascendens, videlicet in. 4. 7. & 10. ab eodem minor, & debiliior erit significatio sua, quam dum fuerit in angulis ab ascendente signo. Nec minus de Marte iudicabis secundum qualitatem suam, quem modo prædicto in angulis existentem, vel succedentibus, remissus tamen, in significatorem elegeris, & sic de planetis alijs. Quorum etiam committionem, & aspectuum reciprocationem, & in signis permanentiam considera. Aspice similiter Mercurium, qui si fuerit in medio cœli in signo aereo, significat diuersitatem magnam in aere, tonitrua magna, & crebra fulgura, maxime si aliqua infortunarum fuerit in angulo aliquo ab ipso Mercurio. Et adiuua te in hoc à parte aeris, & ventorum, faciendo hanc participem cum significatore ipso, quod si fuerit cum parte eadem repertus, vel eiusdem domino, iudica ex eo, sicut ante diximus, per existentiam ipsius in angulo, & aspectus alios planetarum. Pars hæc accipitur à loco Mercurij vsque ad gradum domini domus in qua est, addendo desuper gradus ascendens, & projicitur deinceps ab ascendens signo & ubi finitus fuerit numerus, ibi est pars prædicta, quod si Mercurius fuerit in domo sua, accipe suos met gradus vsque ad ascendens, & projice ab ascendente. Et tunc vide quomodo fuerit pars illa cum planetis, & secundum hoc iudica. Et illud quod diximus de introitu Solis in Arietem, hoc idem facies de ingressu ipsius in quamlibet quartarum Zodiaci. Similiter de ingressu Solis, & Lunæ in quodlibet signorum duodecim. Tamen fundamentum & radix omnium prædictorum est ab ascendente coniunctionis, vel oppositionis quartarum anni, & à domino locorum ipsorum, quoniam quando isti fuerint in locis humidis, & pluuiosis, significant pluuias, maxime si applicuerint planetis humidis, & pluuiosis, & si e contra contrarium iudica.

¶ Et scias quod quoniam planeta significator fuerit occidentalis, retrogradus vel pui morus, aut descendens in latitudine, vel in circulo suæ augis, significat pluuias, & e contra. Itē si fuerit robustus pluuias designat, propter Martē, quod sol robustus pluuias minuit.

¶ Scitur etiam dispositio aerea in pluuijs contritijs, & conuersionibus ab introitu Solis in .10. gradum ♈. Nam si tunc Iuppiter, Venus, & Mercurius fuerint occidentales, aut retrogradi, iudicatio anno illo pluuias multas, postmodum confidera stellam Saturni, & Martis, quorum alter fortior sit, & quam societatem cum planetis, & Mercurio praefertim habuerit.

¶ Albumasar partem diei assumit, quando Sol oritur die qualibet accipiendo gradus, qui sunt à Sole ad Saturnum, numerum illum projiciens à Luna, & secundum locum, & naturam planetæ aspiciens illum, in quo cadit numerus ipsius, de die illo diiudicat. Et similiter ab ascendente introitus Lunæ in quodlibet signorum, donec manserit in eo.

¶ Ex Leupoldo tractatu sexto de mutatione aeris.

Pro quartis anni consideranda sunt initia quinoctiorum, solstitiorum, & praecedentes coniunctiones, vel praeventiones luminarium, & anguli cæli, & domini praedictorum locorum omnium, necnon coniunctiones, & applicationes planetarum, naturæ signorum, & stellarum quæ in eis sunt ex fixis, & planetariis in se, & mansiones Lunæ. 28. demum regulæ, quas ponunt Astrologi de mutationis aeris præcognitione.

Propterea signa humida sunt ♉ ♊ ♋ & ♌. his additur ♎ & ♏. Partes quoque signorum humide sunt fines ♋, principia ♌ & ♍ & finis quoque ♏, & initia ♎ & ♏. Pluuiiales natura sunt Venus, Mercurius, & Luna.

Saturnus autem cum praefuerit anno absque aspectu ♄, vel planetæ frigiditatem ipsius temperantis, frigus intimat, & magis cum fuerit ascendens in medio circulo suæ augis.

Iuppiter absque aspectu alterius, vel cum Sole etiam aerem temperat, & facit ventos septentrionales, mediocres tamen.

Mars cum praefuerit anno absque aspectu ♄, vel planetæ infrigidantis, hyemis frigora contemperat, æstatis calorem auget, & eo magis in signo calido, & si ascendat in circulo suæ augis.

Sol variat anni quartas secundum coniunctionem, & aspectus planetarum ad eum. Saturnus namque cum Sole in hyeme absque aspectu Martis auget frigus, in æstate calorem minuit, & eo magis in signis frigidis.

Venus autem quomodocumque, vel sit cum Sole, vel praesit anno, in vere, & hyeme humiditatem auget, in æstate & autumno siccitatem minuit, maxime in signo humido, & dum eam planeta siccus minime aspiciat.

Mercurius eodem modo cum ☿ qualitatem aeris variat, & corrumpit ventos, maxime in humidis, & ventosis, in calidis vero, & siccis siccitatem adauget.

Luna quolibet mense naturam, & qualitatem aeris commiscet, & temperat ex coitu Solis, quemadmodum Sol idem, in anni quartis.

¶ Ex eodem tractatu regulæ hæc comprehenduntur.

In revolutione anni si ☿ in signo proprio est, multum pluet, in domo ♄, parum, in alijs mediocriter.

In con. vel oppositione luminarium, quæ præcedit revolutionem anni si ☿ locum illum aspiciat, erunt fulgura, tonitrua, & lampades.

Annuales pluuiæ secundum indos præsciuntur sic. In cō. ☿ ☽, vel oppo. quæ præcedit revolutionem anni in ♋, si Luna aspiciat ♄, et ambo sint in signo humido, & nō

DE MUTATIONE

interceperit aspectus ♄, erūt nubes nigræ, & pluuia lenta, & durās. Et si planetæ inferiores, videlicet ♀ & ♄ Saturnū aspicient, tunc erit pluuia maior; & durās. In reuolutione anni si ♀ ♄ & ☿ in locis humidis fuerint, pluuie redundabūt. idē de partibus trium horū intelligas. Et in hoc accipiunt gradus, hora ☿ vel ♀ lunarium æquinoctiū vernum præuenientis, qui sunt à Mercurio in dñm signi, in quo fuerit ♄ ipse, & additis gradibus ascendētis signi ab horoscopo proſectiūtur. Et sic iuxta dominum loci, vbi terminatur numerus ille, dñdica. Quod si ♄ in propria domo fuerit, accipe suosmet gradus; & proſice vt supra. Item pars alia pluuie accipitur in die à ♀ in ☿. in nocte vero econuerso, & proſicitur ab ascendente quæ si cadit in loco humido, multæ erunt pluuie, & econtra. Et cum ad locum illum ☿ vel ♀ peruenerit pluet.

Cum Sol tropicum intrat signū, si ♀ tunc de humido lunam aspexerit in humido, pluuie erūt multæ. Si tunc Luna nō est in humido, sed ♀ tantū temperat. In reuolutione si ☿ aspiciat ♀ vel ♄, & ambo sunt orientales, in principio anni erunt pluuie, si occidentales econtra.

Item si ☿ tunc de ♄ ♀ aspiciat, pluuie abundant.

Cum ☉ est in ♊ vel ♋ & ♀ tunc retrograda, ver erit pluuiosum valde.

Si Soli à ♋ in ♊, hoc est in hyeme planeta solus retrogradus iungat, siccitas erit. Si duo, humiditas congruens. Si tres, humiditas addens. Si quatuor fiet diluuium. de superioribus non potest hoc esse, nisi per aspectum.

Sol in terminis ♋ in æstate calorem auget, in hyeme & vere siccitatem.

In autumno si omnes planetæ cum ☉ retrogradi sint, & in hyeme dirigantur, erit siccitas summa in omni climate.

Et si in quarta æstiuæ planetæ quinque sint directi propter eorum infrigidationē, æstas eadem erit decora. Si tunc retrogradi, erit calida, nam retrogradi calefaciunt, & directi infrigidant. Similiter si sunt in summitatibus eccentricorum suorum, minus calefaciunt, cum descendunt ad fundum epicycli, atq; eccentrici sui, caleſcunt magis.

Leues combusti in quarta autumnali frigus faciunt, atq; humiditatem, in quarta hyemali nubila, & ventos meridianos, in vernali nebulas, in æstiuā caliditatem, & tonitrua. similiter & de ponderosis.

Cum Sol intrat, s. ♄ si tunc ♀ in aqueo fuerit, erunt pluuie ad submersionem. Venus retrograda, & orientalis ☉ in ♋ & ♌ in vere dat ibres paucos, in principio vero hyemis abundanter.

Item ♀ in hyeme directa, & orientalis, in principio dat pluuias paucas, & in fine hyemis multas, ni stella alia ☉ occurrat affiniore.

✱ ¶ Dies & tempora pluuiosa particulariter dignoscere.

Pars diei accipitur oriente Sole die quouis, quantum est videlicet, ex gradibus, à ☉ in ♋, & hoc totum proſice à loco Lunæ. Quod si in humidum cadet, humiditatem significat die illo, & econtra. Similiter in domo ♀ & ☿ pluuiam. in domo ☉ & ☿ serenitatem, in domo ♄, & ♄ ventos. ♋ autem signū nubila significat.

Luna etiam cum ♀ vel ♄ in humido, & magis cum utroq; pluuiam adauget. Quod si fuerit in ♄ in opposito ☿ idem efficiet, maxime ☉ in ♋ vel ♌ existere.

Cum Luna & ☿ sunt simul in humido, & alter inferiorum ♀ scilicet, vel ☿ aspiciat ☿, nubila erunt terribilia, lampades, conitrua, et grando, sed non pluet, nisi Mars aspiciat ♄, ☿, vel ☉.

Luna intrans ☿ hora Solis, Virginem hora ♀, Libram hora ☿, Sagittarium hora propria, taurum hora ☿, Geminos hora ☿ significat secundum naturam domini horæ, & signi in quo erit ipse.

Cum Luna intrat ♋, vel Pisces vertit aerem, & perturbat, dum autem ☿ adusto applicat, aut eidem de ♋ opponitur, pluuiam facit.

Cum ♀ Marti applicat in ♋ statim pluet.

Cum ☉ ♀ ☿ & ☿ sunt simul, imbres continuos faciunt die eademmet, etiam si Luna aspiciat eos aliunde.

I. una Solem in ☿ ex ☿ vel ☐ aspiciens, pluuias ciet ☿ ibidem commorante.

Cum ♀ est in angulo in ☿ vel ☐ luminarium, certum est pluuiæ indicium, Similiter dominus ascendens in angulo aqueo.

Verius sub radijs ☉ ad ♋ in ♋, Luna eisdem ♀ maxime applicante, die eadem pluuiam facit, similiter dum ☉ ☿ signum inijt.

Eisdem cum Luna in cardine aqueo ♀ applicat, vel ☿, pluet, quamdiu applicatio durat.

Cum Luna est in opposito ☉ aut cum ♀ in ♋ ad ♋, vel ☿ erunt imbres, vel lampades, conitrua, & fulgura.

Luna in signo foeminiño respiciens planetam retrogradum in signo foeminiño statim pluet, nec minus eadem iuncta planetæ retrogrado, dum aucta est lumine, signum est pluuiæ.

Indi diem pluuiæ sciunt per distantiam con. oppositionis, vel quadraturæ luminarium ad gradum planetæ pluuiæ. Ita ☿ si Luna est in signo mobili, dant cuilibet gradui horam vnam, in fixo diem, in communi in prima medietate eiusdem dant diem vnum, in secunda medietate horam. Et tunc pluet. Quod si Mars tunc ☿ aspexerit, differtur pluuiæ, quousque Luna ☿ aspiciat ☿ vel ☐ aspectu in loco, sed tunc pluet si ☿ vim det ☿ (existente utroque in humido) & alter inferiorum ☿ aspiciat, verum nubila erunt ☿ & ☿ sic se habentibus si neuter inferiorum ☿ aspiciat, sed si ipse ☿ ☿ aspiciat, pluet.

Cardines Lunæ, 12. sunt, ex quibus iuxta qualitatem loci, & aspectus vel conjunctiones planetarum ad Lunam dispositionem aeris diiudica. primus est locus conjunctionis ☉ & ☿ Secundus est ad con. loco gradus, 12. Tertius est ad con. gradus, 45. Quartus gradus, 90. Quintus gradus, 135. videlicet signa quatuor, & gradus, 15. Sextus est gradus, 12. ante oppositionem. Septimus, & alia loca quinque vsque ad conjunctionem, ab oppositione sumuntur per gradus totidem quot supra.

Aperitiones portarum pro pluuijs, aut ventis decem sunt, aspectus videlicet, & conjunctiones planetarum quorum domus contrarie sunt, ut ☿ & ☉, ☿ & ☿, ☿ & ☿, ☿ & ☿. Item si ☿ transfertur ab aspectu, aut ☿ ☉ ad ☿ vel econuerso. Et ad ☿ similiter ad ☿ vel econuerso. Et ad ☿ ad ☿ vel econtra, semper est aperitio portarum, ex quibus fiunt aeris mutationes secundum naturas planetarum inter quos sit translatio, et ille qui recipit conjunctionem, vel aspectum dominus est, & significator rei istius.

Habita namq; figura cœli pro tpe p̄ciso & æquato ipsius ☐ ☿ aut ☿ in primis cōsidera in quam domum cœlestis figuræ, & in quod signum coniunctio

eadem $\square$ aut ϕ cadat. Deinde signum, & gradum ascendentem diligenter attende. Caterum signa quae in angulis sunt obliuioni non trades. Planeta enim qui in his locis oibus plura habuerit testimonia, & dominia, is profecto huius figurae, & temporis dominus principalis censebitur, qui vero pauciora, particeps erit in dominio. Illud tamen non est est ignorandum, quod planeta, qui in loco coniunctionis $\square$ aut ϕ & ascendente plura habuerit dominia, alterum antecellit, & ei praeponi debet. Ad aduertendum igitur cuius sit natura planeta in figura predominantis, quia generalis temporis dispositio ad qualitatem huius planetae appropriatam accedet. Vt si Saturnus erit dominus temporis coniunctionis $\square$ aut ϕ , huiusmodi tempus erit frigidum, & siccum. Si Venus humidum. Recte philosophantes in ea re Solem, & Lunam in dominis non eligunt, quia planetas duntaxat generales temporum gubernatores esse affirmant. Sane in coniunctione eligunt dominum a loco ϕ . in oppositione autem a loco huius luminaris, quod supra terram est, aut in oriente praecipue, quia ibi maior ei adest virtus. Itidem de quadratura sere asserunt, cuius locum accipiunt a loco luminaris existentis supra horizontem, si alterum sub terra est. Sed si utrunque (quod plerumque contingit) fuerit supra, vel sub terra, locum huius luminaris, qui in figura fortior, at fortiorior apparet, in locum quadraturae assumunt, utpote si fuerit unum luminare in angulo, aut succedente, & alterum in cadente, locum luminaris in angulo, aut succedente, tanquam fortiores, in locum quadraturae acceptant. Generaliter autem dictum volumus, quod planetarum testimonia, & dominia venanda sunt ex tabula propria eiusmodi rebus indagandis infra luculatilissime exposita. Delecto igitur domino ad ipsos ϕ & $\square$ luminarium, notabis primo eius affectionem, aut naturam, quia plerumque tempus eandem imitabitur. Secundo considera signum quod delectus dominus possidet, ad cuius qualitatem igneam, aeream, aquaeam, aut terream tempus ipsum disponetur. Tercio diligenter attende signum ascendens cuius affectionem, & de qua mansionem lunari existat. Dominum etiam signi ascendentis consideratu dignum minime posthabereas. Quarto animaduerte planetas qui in angulis sunt, qui enim angulum decimum, aut ascendente occupant, potiores, & fortiores sunt his, qui septimum, aut quartum tenent. Quinto vide cum quo planeta Luna post ϕ & $\square$ aut ϕ aspectum ineat. Sexto considera quibus planetis, aut stellis fixis dominus figurae sit iunctus, aut ab eis aspectu affectus. His oibus perspectis tandem correlarium inferas magni. Si dominus coitus $\square$ aut ϕ fuerit affectione humidus, & loca principalia praenarrata, & planetae in his humidi. Et si cum hoc ipse dominus fuerit coniunctus stellis, aut planetis humidis, aut ab eis aspectus, & luna post separationem coierit, aut aspectum habuerit cum planeta humido, & cum hoc natura temporis concordauerit. Si haec omnia, aut potior pars, ad humiditatem inclinauerint, & ueniet humiditas. Si ad siccitatem, accidet siccitas. Si ad caliditatem, calor. Si ad frigiditatem, frigus. Quod si testimonia fuerint equalia, tempus indifferens iudicabitur. Agnita (ut iam positum est) generali dispo[n]e temporis applicationes Lunae ad planetas, et planetas inter se ex diario receptas cum dispo[n]e generali ipsius temporis commisce, & euades rerum particularium certior iudex. Demum haec duo particulim notanda sunt videlicet. Primum temporis significatio tunc maxime mouebitur, cum Luna post coniunctionem $\square$ aut ϕ significatori corpore, aut aspectu valido fuerit coniuncta. Secundum cum Luna peruenerit ad signum ascendens coniunctionis $\square$ aut ϕ , tunc mutabitur tempus secundum affectionem, & naturam ipsius signi.

De horis meridiani, arcu quoque diurno, & nocturno.

TEmpus, et horam meridiani cuiuslibet à gradibus. 36. ad gradus. 51. polares, arcum quoque semidiurnum, vel nocturnum integrum, aut ortum Solis in diebus anni per motum Solis indagaturus. Cum gradu veri loci ipsius in meridie alicuius ex diario accepto in signis sex borealibus tam ascendentibus, quam per gradus ternos descendentibus, ac sinistrorsum positis subsequenter tabulam ingredi, minutis ibidem e regione gradus Solis, vel proximioris sub latitudine loci propositi in communis angulo accepta horis addas, & minutis meridiani propositæ ephemeris cuiuslibet descriptis, siue ex ascendentibus tribus, siue ex descendentibus totidem signis fuerit. Et latitudo loci citra. 45. polarium graduū latitudinem extiterit, ab inde vero supra minuas. In signis autem sex reliquis australibus dextrorsum ascendentibus, vel descendentibus, e conuerso, vbi maior fuerit loci latitudo gradibus. 45. addas, vbi minor, minime, quemadmodum superius, atque inferius tabulæ titulus probissenis borealibus, atque alter pro australibus totidem signis insinuat. Sic namque per horas meridiani ad Venetæ vrbis finitorem ex diario perceptas, cæterorum quoque locorum tempus hoc æquatum habebis.

Hinc arcum semidiurnum si horas, & minuta meridiani cuiuslibet priori modo pro loci latitudine adæquaras, vel pro ipsius Venetæ ciuitatis in diario exactas, ab horis. 24. subdixeris, certum, ac limitatum elicies, quem modo semidiurnum arcum, si ab horis meridiani propositæ subdixeris, ortum Solis, videlicet totum nocturnum tempus educes.

Prædicta etiam videlicet ortum Solis, ac vulgaris meridiani horam per tabulam ad hoc factam iuxta Venetæ vrbis, Veronæ, & aliarum velparem urbium latitudinē graduū. 45. mi. 16. fere sedulo venaturus, cum gradu Solis à capite Y in 56. & ab hoc similiter in calcem typi in prima Tabulæ secundæ facie, & à capite 2. vsque in finem X prædicto modo, cum numero graduum descendentiū, si in fronte tabulæ signum, vel ascendentiū, si in pede tabulæ id ipsum repertum fuerit, tabulam ipsam ingredi. e regione namque veri loci Solis tum ortum ipsius primo, tum secundo certum meridiani tempus per horas, & horarum minutas, exhibebis.

De æquatione dierum, & diebus vulgaribus, & æquatis.

A Equationem dierum post meridiei normam Ephemerici cuiuslibet, non minus q̃ astronomis tabulis pro planetarum motibus haud quā inuilem censemus. Sic enim exquisitius ipsorum & præferim lunę motus, ad horas quaslibet, & minuta ex diario adæquantur. Alius est enim inæqualis dies, apprensus, & vulgaris (à quouis ferè cœli puncto sumpto exordio) tum ob inæqualem motus Solis additionem diurnę eiusdem lationi abortu, vel à meridiē ad eundem cœli locum, tum ob zodiaci, atque horizontis obliquitatem, & dispares propterea signiferi partium ascensionem. ob quę docuerunt nos prædecessores nostri astronomi obseruatores dies omnes naturales, vt supra, inæquales perceptos, ad æqualitatem ex tabula equationis dierum adduci. Alius ergo hic erit equalis dies astronomico more à meridiē quouis assumpto initio, ad quem planetarum motus, & tabulę quęq̃ stellarum motuum exquisitissime regulantur. Alius dies equatus vt infra. Cum nanque ex diurna, & inæquali motus Solis additione supra primi mobilis deuolutionem, plus vel minus medio, & equali motu apprensus dies excreuerit, adhibita huic ascensionali norma ad æqualitatem dies eadem per propriam tabulę huiusce normam deueniet. Vbi vero æquatio dierum ad minuta 33. horarum, vel prope concreuerit, mox pedetentim per diminutionem temporis ad nihilum, vel nulla redigetur. Habitis ergo diebus mensum, & horis propositis, ad quas planetarum motus adæquare desideras, cum vero loco Solis tabulam hanc equationis dierum ingredi, quodq̃ ex minutis horarum in angulo communi signorum, & veri loci Solis inueneris, hoc totum ab horis vulgaris diei, à quouis etiam meridiano acceptis (ad quas ascendens, & cetera cœli domicilia eriguntur) educes, hac demum subtractione peracta, cum reliquo horarum, & minutorum (dempta prius, vel addita meridianorum distantia) veros planetarum motus ex diurno per propriam tabulę exarationem, superius descriptam edifies. Quam quantam dierum equationem horę quęlibet in conjunctionibus, & aspectibus planetarum Ephemerici cuiuslibet ascriptę, atque etiam in radicibus introitus signorum singulariter acceperunt, non hac ideo æquationis norma indigent ædem prius scilicet adæquatę. Quare adhibita tantum horarum adæquatione ab vno ad alium regionis meridiem iuxta præmissę tabulę scriam, atq̃ amborum etiam meridianorum distantia ex vtraq̃ regionum vel ciuitatum tabula inferius exponenda, ascendens, & cæterarum domorum cuspidem ad horas hæc diei, æquati scilicet institues.

Tabula æquationis dierum recognita.

De motu planetarum horario.

Planetarum motum ad horas, & minuta per tabulas infra scriptas exploraturus, scito qd ubi cum horis propositis ac modis vtriusq; (vt supra) videlicet per tabulam æquationis dierum, atq; differentiam meridianorū adæquatis tabulam quamlibet propriam inieris, gradus minuta, & secunda siue minuta primum, & secunda pro proportionali motu planetæ cuiusvis è regione horarum ab vna vsq; ad. 24. siue pro numero minutorum ad. 60. vsq; minores etiam fractiones sub planetæ motu diurno in angulo cōmuni, quodlibet. s. per se notatum inuenies. quæadmodū inferius in calce tabulæ edirecto. H. literę pro horis gradus, & minuta, vel minuta, & secunda, atq; inferius pro minutis horarum minuta, & secunda, siue (vt in priori tabulæ parte) secunda, & tertia ex planetarum motibus apparent. Quoties enim ex numero horarum gradus primum, & minuta exhibueris, toties etiam per minuta horarum in angulo communi ex motu planetarum minuta, & secunda elicies. Vbi vero minuta, & secunda tantum ex horis habueris, tunc per minuta horarum secunda, & tertia ex motu ipso diurno exhibueris.

Insuper quoties horarum, ac minutorū numerus impar citra primam horarum, ac minutorum lineam deficit, tunc motū planetæ in prima eadem tabulæ linea repertum priori gradū, vel minutorum numero (seruata semper eiusdem denominationis serie) adiungito. ex hinc namq; cuiuslibet imparis numeri motum edisces.

Uterius ubi præcisus planetarum motus in fronte tabulæ minime ascriptus apparuerit, tunc ex duobus planetæ motibus maioris scilicet & minori proportionalem partem planetæ motus, & tabulæ eiusdem accommoda, sic enim proprius planetarum motus pro horis quibuscumq;, & minutis ex diurno illicet resultabit. ubi (vt prædiximus) ex priori tabulæ motu, ac proportionali parte summam in vnum adduxeris.

CANON DE COELI DOMIBVS FABRICANDIS

cum subsequētibz ē Ioannis Stœfleri Ephemeridibus assumptus. ✱

Duodecim domos cœli secūdum modum commodiorem, quem rationalem dicimus, facillime construere, digessimus quinque tabulas particulares pro domibus cœli constituendis, ad gradus tamē integros, commodissimas. Vnam quidem pro latitudine; eleuationis poli arctici, 42. graduum, altam pro latitudine, 45. graduum, tertiam pro latitudine, 48. graduum, quartam pro latitudine, 51. graduum, & quintam pro latitudine, 54. graduum, tanquam suffecturas toti propemodum Europæ, & præcipuæ nouit̃s, qui astronomicæ disciplinæ iā priūm indulgēt. Tamen si saltum fecimus per trinos gradus, ita q̃ pro binis gradibus medijs proprias tabulas non condidimus: Licebit tamen vti tabula quapiā primarie quidem & condigne, pro latitudine cui ascribitur. Rationabiliter autē & sine vestigio erroris sensibilis pro duabus latitudinibus collateralibus, quarū vna proximo minor est latitudine propriam tabulam habente, alia autem proximo maior ea. Et sic tabula latitudini, 42. graduum inscripta, duabus etiam latitudinibus, 41. & 43. graduum, non inepte accommodabitur. Denique tabula, p. 54. gradibus conscripta, 53. & 55. gradibus seruiet. Haud aliter, de tribus reliquis interceptis, intelligendum est. Nunc ad rem ipsam faulste properemus. ¶ Ad meridiem diei pro libito accepti, sume ex Ephemeride motum Solis cuius signum quære in fronte tabulæ, sub numero polari tuæ habitationi conuenienti, aut vicini, gradum vero Solis, in linea decimæ domui assignata, perquire. Quibus inuentis, ē directo gradus Solis dextrorsum, initia quinque domorum cœli vnde decimæ videlicet, duodecimæ, primæ, secundæ & tertiæ, ad meridiem propositi diei, dicto citius deprehendes. Ipse autem gradus Solis principium regie dom⁹, quam decimam appellamus, ostendet. Quod si gradui Solis minuta aliqua adhuc ferint, hac lege initia duodecim domiciliorum cœli, tēpore meridiano agnosces. Gradum Solis integrum, vt iam exposuimus, in tabula percontare, ad cuius sedē accipe, extra scribendo, tempus ad sinistram, & quinque domorum vndecimæ, duodecimæ primæ, secundæ & tertiæ, initia ad dextram. Tempus sic extra scriptum confer ad tempus immediate sequens maius, differentiam sumendo, quam tempori iam extra scripto subnecte. Idem fac omnibus domorum principijs, suā cuiuslibet differentiam subscribendo. De differentia igitur temporis extra notati & minutis Solis, accipe partem proportionalem, secundum proportionem omnibus notissimam ad. 60. minuta, quam partem proportionalem immitte in tabulam cuius titulus est, Quatuor minutorum temporis, quærendo minuta in linea minutorum ad sinistram, & secunda (si qua fuerint) aut propinquiora in linea secundorum adherenti. Differentiam autem domus, puta vndecimæ duodecimæ & cæterarum domorum, quære in capite tabellæ, & quod in angulo comuni reperies de gradibus et minutis, aut minutis duntaxat, adde huic domui cuius accipisti differentiam: hoc pacto iustius cœli domicilia ad meridiem institues.

¶ Ad tempus autem quodcunque post meridianum, initia duodecim cœli domiciliorum hac norma absolues. Cum signo & gradu Solis, ex Almanach receptis ingredere tabulam domorum tuæ habitationis, quemadmodum prælibauimus,

& e vicino gradus solaris sinistrorsum tempus in horis & minutis repertum extra notato. Memento tamen si gradui solis minuta affuerint, differentia sumenda: de qua & minutis solis accipe partem proportionalem iuxta integros gradus ad .60. minuta, quam partem proportionalem tempore extra scripto ad iunge, minuta minutis: & secunda si .30. excefferint, eorum loco minuta vnica tem appone: si pauciora .30. fuerint, reſce ea. Tempore ſic reſtificato pro gradu & minutis solis, adde tempus tuum postmeridianum minuta minutis, & si .60. at tigerint, pro eis vnam horam ad horas præcedentes augeas, adde etiam horas horis, & si ad .24. aut plures creuerint, reſce .24. reliquis ſeruatis. Adiunge tandem pro quibuslibet .6. horis temporis postmeridiani vnum minutum tempore iam ſeruato, & conſtabis tempus præciſum & egregium intentioni tuæ. Cum quo tabulam domorum tuarum habitationis ingredere, & in quo verſu horas & minuta aut viciniora offeſdes; mox in eodem ſex domos celi agnoſces. ¶ Si autem ad tempus antemeridianum .12. celi cuſpides ſtatuere volueris, diſtantiā propoſiti temporis à meridie ſurripe à tempore per ſignum gradum & minuta ſolis ſecundū modum præpoſitum verificato, aut à .24. horis accommodatis (ſi alias ſurreptio fieri nequeat) deme etiam tones vnitate quoties diſtantiā temporis à meridie ſenarium continet, & cum reſiduo ſupra tabulam domorum, quæ age quemadmodum de tempore postmeridiano præcepimus, & in certam notiſſimā ſex cuſpidum celi deducis. Obſeruandum tamen quod quotieſcunq; tempus finaliter quærendū in tabula repertum non fuerit intrandum eſſet cum tempore minori illic reperto, & cum reſiduo tempore, & differentijs domorum elices portuunculas domibus adijciendas, & ſic rite omnia abſolues. Sex domibus quantum ad earum initia aut cuſpides cognitio aliæ ſex per diametralem oppoſitionem in ipſo zodiaco quæ ſacillime cognoscuntur. Si præciſionem omnimodam in celi domibus conſtruendis amas, Ioannis de Regiomonte directorium delectatione ingeret. Poſtremo, habitis iniſſis .12. edium coeleſtium ſuſcita pro tua induſtria figuram celi quemadmodum iudices aſtronomiæ viſitato erigunt atque depingunt. Cui ex Ephemeridario inferre (prout res ipſa exigat) loca planetarum, in hanc enim domum planetam quempiam intrudes quæ eius gradum ſub quo planeta decurrit in figura coeleſti comprehendit, tandem vaticinare effectus futuros, res naturæ ſecretiſſimas quæ proſecto miratu digniſſimas. Lector vale.
